Important Note: You must complete Line A and Line B for all factors used. For taxpayers who apportion their Net Income in and out of Philadelphia, the 2001 Business Privilege Tax has a double weighted receipts factor. This is accomplished by calculating the Philadelphia receipts factor (Line 10C) and repeating it (Line 10D). The total of the factors (payroll, property and receipts) are then divided by the total factors used (always counting receipts as 2 factors) to obtain an average.
