

Research Data Dictionary

Introduction

The Data Management Office (DMO) in the Office of the Deputy Mayor for Health and Opportunity operates and maintains the CARES integrated database. CARES receives information from eleven source databases, including data from the Philadelphia Department of Public Health, the Department of Behavioral health and Intellectual disAbility Services, the Department of Human Services, the Office of Supportive Housing, and the Philadelphia Prison System. The data in CARES is used for integrated case management, internal analytics, and research.

Purpose of this document

The development and distribution of the data dictionary is an effort to improve communication of data maintained in CARES and to improve the quality of and access to metadata by external users. The city is providing this information in an effort to assist investigators to develop more specific data requests in research proposals that include city maintained data.

Description

In coordination with contributing departments, DMO's Research Data Dictionary includes data elements relevant to research and academic communities, based on data currently available and prior external requests for data from the City of Philadelphia. The data elements identified in the Research Data Dictionary are grouped into descriptive domains for ease of use and navigation purposes. Available service domains include the following:

- Behavioral Health
- Child Welfare – Dependency/Delinquency
- Drug & Alcohol Treatment
- Emergency Shelter
- Homeless Outreach
- Incarceration
- Lead Exposure
- Out-of-School Time
- Prevention – Child Welfare
- Youth Detention

Exclusions

The Research Data Dictionary does not include all data elements in the CARES environment. If there are specific data elements of interest for study, please contact DMO directly. The CARES integrated database stores client identifiers which are available upon approval by an Institutional Review Board (IRB) and the City of Philadelphia. Client identifiers are not included in the Research Data Dictionary. Examples of stored client identifiers include the following: name, address, date of birth, social security number, case numbers, and system assigned identifiers.

Notes:

Address information and date of birth are transformed to meet federal, state, and local regulations for data protection; as a result, data elements containing address and data of birth information will not be provided unless approved by an IRB and the City of Philadelphia.

Description of Data Elements

- Data Element Row Number: Numeric value assigned to reference a specific data element in the table
- Data Element Division Name: Division that provides data to CARES for cross-system integration
- Data Element Department Name: Department within the participating source agency that collects the data element
- Data Element Service Domain: High level service category description for data element
- Data Element Source Table Name: Source department table where element is stored
- Data Element Name: Technical name in CARES for data element assigned by source department
- Data Element Description: Data element description assigned by the source department
- Data Element Code Set ID: If a code set exists for the data element, a hyperlink provides access to the expanded dataset
