

Tips for a Temporary Handwashing Station

You Will Need:

- 1) Insulated water container with a spigot that can stay open (like a coffee urn or Cambro unit). The spigot should not have to be held open by the person to dispense water.
- 2) Liquid soap
- 3) Paper towels
- 4) Container for the waste water

Steps to Set Up the Station:

- 1) Fill the insulated container with warm water. The temperature should be at least 100° F.
- 2) Place container for waste water on the ground so it can catch the water after the hands are washed.
- 3) Place liquid soap and paper towels along side of the insulated container.
