

BEFORE THE
PHILADELPHIA WATER, SEWER AND STORM WATER RATE BOARD

In the Matter of the Philadelphia Water Department's Proposed Change in Water, Wastewater and Stormwater Rates and Related Charges	Fiscal Years 2019-2021
--	------------------------

Direct Testimony

of

Raftelis Financial Consultants, Inc.

on behalf of

The Philadelphia Water Department

Dated: February 9, 2018

1 Ms. Locklear has been with RFC for over six years. She is a Senior Manager with
2 the firm, responsible for client management, project management and oversight
3 of production of project deliverables and production of deliverables.

4 Ms. Fitts has been with RFC for over six years. She currently serves as a Manager,
5 coordinating project elements and performing data analysis.

6

7 **Q4. PLEASE SUMMARIZE YOUR RESPECTIVE BACKGROUNDS AND**
8 **WORK EXPERIENCE**

9 A4. Mr. Davis is a graduate of Wake Forest University with a Bachelor of Science
10 Degree in Physics and Mathematics. He is also a graduate of the McColl School
11 of Business at Queens University with a Master of Business Administration
12 Degree. In 1993, he joined Lance, Incorporated based in Charlotte, North
13 Carolina. While at Lance, he served as an Environmental Engineer, a Capital
14 Projects Manager, and a Financial Analyst. In 2000, he joined RFC where he has
15 been involved in numerous financial and management consulting engagements
16 for water, sewer, and storm water utilities. He has served in increasing levels of
17 responsibility within the firm moving from Consultant to Manager to his current
18 position of Vice President. He has assisted many water, sewer, and storm water
19 clients on financial and management issues in addition to Philadelphia Water
20 Department (PWD or Department). His clients have included the City of
21 Baltimore (MD), DC Water, Washington Suburban Sanitary Commission (MD),
22 the City of Richmond (VA), the City of Reading (PA), Columbus (GA) Water
23 Works, Charlotte Water (NC), the City of Virginia Beach (VA), the City of

24

25

1 Buffalo (NY), Erie County (NY) Sewer Districts, the City of San Diego (CA), the
2 City of Phoenix (AZ), the City and County of Honolulu (HI), and others.

3
4 Mr. Davis is a member of the Water Environment Federation where he serves on
5 the Utility Management Committee as Chair of the Finance and Administration
6 Subcommittee. He also serves as utility management liaison to the Technical
7 Practices Committee. He is the past-chair of the Utility Management Conference
8 co-sponsored by the Water Environment Federation and American Water Works
9 Association. He is also a member of the American Water Works Association.

10 In 2014, Mr. Davis co-authored a chapter in *Water and Wastewater Finance and*
11 *Pricing, Fourth Edition* (Raftelis) titled “Financial Capability and Affordability”.
12 He also co-authored an article titled “Is our Water Affordable” for the July 2014
13 edition of the American Water Works Association Journal.

14
15 Mr. Davis is currently serving as Chair for update of the Water Environment
16 Federation’s *Manual of Practice No.27: Financing and Charges for Wastewater*
17 *Systems*.

18
19 Schedule RFC-1 provides more detail regarding the work experience of Mr.
20 Davis.

21
22 Ms. Locklear is a graduate of the University of North Carolina at Chapel Hill with
23 a Bachelor of Arts in Political Science and a Masters of Public Administration.
24 In 2004, Ms. Locklear joined amec (now Woods Group), in its Nashville, TN
25 office and in 2006 transferred to its Raleigh, NC office. While at amec, she served

in positions of increasing responsibility from public relations coordinator up to project manager. She was involved in a wide variety of water resources projects including water quality permit compliance, regulations development, floodplain mapping and stormwater finance. As a project manager and supervisor, she managed multi-million dollar projects and a team of stormwater finance and Geographic Information System (GIS) specialists.

In 2011, Ms. Locklear joined RFC. At RFC, she has been involved in a variety of financial and management consulting engagements for water, sewer, and storm water utilities. She has served in increasing levels of responsibility within the firm moving from senior consultant to manager and now, in her present position as a senior manager.

Schedule RFC-2 provides more detail regarding the work experience of Ms. Locklear.

Ms. Fitts is a graduate of University of Richmond with a Bachelor of Arts in Environmental Studies and Geography. She is also a graduate of Duke University's Nicholas School of the Environment, where she studied Water and Air Resources and earned a Masters in Environmental Management. From 2011 to 2012, she worked with the Colorado Department of Public Health and Environment's Safe Drinking Water Program. In that capacity, she assisted small water system operators maintain compliance with State monitoring and reporting standards.

In 2012, Ms. Fitts joined RFC. During her time at RFC, she’s been engaged in numerous stormwater utility implementations and water, sewer, and stormwater management consulting projects. In addition to working with the Philadelphia Water Department and Water Revenue Bureau on the Management Audit, she has worked with clients across the Commonwealth of Pennsylvania and throughout the country. Projects she’s managed or been involved with include the City of Richmond (VA), the Borough of Carlisle (PA), Lower Paxton Township (PA), the City of Baltimore (MD), the City of Durham (NC), Granville County (NC), City of Raleigh (NC), Beaufort County (SC), City of Jackson (MS), City of Cleveland (OH), City of Dallas (TX), Pinellas County (FL), and New Orleans (LA).

Ms. Fitts is a member of the Water Environment Federation and in 2017, she contributed to WEF’s *Manual of Practice No.27: Financing and Charges for Wastewater Systems*.

Schedule RFC-3 provides more detail regarding the work experience of Ms. Fitts.

Q5. WHAT IS THE PURPOSE OF YOUR TESTIMONY TODAY?

A5. We will provide background on the development and implementation of the City’s Tiered Assistance Program (TAP) as well as program costs to be used in the Rate Case. We will also describe reporting RFC performs in support of cost of service development for the Rate Case.

1 SECTION 1: TIERED ASSISTANCE PROGRAM (TAP)

2
3 **Q6. WOULD YOU PROVIDE SOME BACKGROUND ON THE TIERED**
4 **ASSISTANCE PROGRAM IMPLEMENTED TO HELP ADDRESS**
5 **CUSTOMER AFFORDABILITY WITHIN PHILADELPHIA?**

6 A6. TAP is the City’s new program affordability program for residential customers
7 who meet low-income or special hardship criteria. The initiative is a result of the
8 enactment of Council Bill 140607-AA, *an ordinance amending Title 19 of the*
9 *Philadelphia Code (Finances, Taxes and Collections), Chapter 1600 (Water and*
10 *Sewer Rents), by providing for installment payment agreements, all under certain*
11 *terms and conditions* and the delivery of the Philadelphia Water, Sewer, and
12 Stormwater Rate Board final decision on proposed changes in rates and charges
13 (Rate Determination), in response to the Application of the Philadelphia Water
14 Department for Increased Rates and Charges (FY 2017-2018) dated June 6, 2016.

15
16 TAP regulations, an amendment to Chapter 2 of PWD Regulations, were
17 submitted to the Department of Records for public comment on November 10,
18 2016. After a public hearing, the Commissioner’s Report was filed on March 13,
19 2017. These regulations became effective ten days later, on March 24, 2017.

20 The Water Revenue Bureau (WRB) and PWD worked together to implement the
21 program, which began accepting applications from customers on July 1, 2017.

22 **Q7. HOW IS TAP STRUCTURED?**

23 A7. TAP provides for participating customers’ bills to be capped as a percentage of
24 their income. Bills are capped at between 2% and 4% of their household income
25

1 based on where their household income stands with respect to the current Federal
2 Poverty Guideline. For monthly gross income limits based on household size for
3 the calendar year 2017, see **Error! Reference source not found.** below.

- 4 • If a customer's household gross monthly income is at or below 50% of the
5 federal poverty guideline, then monthly bills for water, sewer, and
6 stormwater usage and service charges are fixed at 2% of the household
7 income. The minimum TAP bill is \$12.00 per month. Any actual charges
8 above the fixed amount are forgiven.
- 9 • If a customer's household gross monthly income is above 50% and at or
10 below 100% of the federal poverty guideline, then monthly bills for water,
11 sewer, and stormwater usage and service charges are fixed at 2.5% of the
12 household income. Any actual charges above the fixed amount are
13 forgiven.
- 14 • If a customer's household gross monthly income is above 100% and at or
15 below 150% of the federal poverty guideline then monthly bills for water,
16 sewer, and stormwater usage and service charges are fixed at 3% of the
17 household income. Any actual charges above the fixed amount are
18 forgiven.
- 19 • If the customer has a gross household income higher than 150% of the
20 Federal Poverty Guideline and provides documentation showing existence
21 of a special hardship within the last 12 months, then the customer may still
22 qualify to participate in TAP. If a customer qualifies for TAP based on a
23 special hardship, monthly bills for water, sewer, and stormwater usage and
24 service charges are fixed at 4% of the household income. Any actual
25 charges above the fixed amount are forgiven. A special hardship can be:

- Increase in household size
- Loss of a job, lasting more than 4 months
- Serious illness, lasting more than 9 months
- Death of primary wage earner
- Domestic violence
- Other circumstances that threaten household's access to necessities of life

A customer does not need to have any back debt or any balance on their account to qualify for TAP. If the customer does have back debt on his or her water account, that debt will be protected, meaning no enforcement action or collection activity will be taken on that debt while the customer is in TAP. Additionally, WRB provides a 14-calendar day stay of enforcement to customers for the first three times a request for an application is made over a 12-month timeframe. (After the third request, the stay is no longer offered.) A customer's back debt related to HELP loans or agency charges are not covered under TAP.

After 24 full TAP payments, a customer's pre-TAP penalties are forgiven.

Monthly Gross (pre-tax) Household Income and Potential Assistance Benefits		
Household Size	Maximum Gross Income (150% of FPL)	Maximum Gross Income (250% of FPL)
1 person	\$1,508 / month	\$2,513 / month
2 people	\$2,030 / month	\$3,383 / month
3 people	\$2,553 / month	\$4,254 / month
4 people	\$3,075 / month	\$5,125 / month
5 people	\$3,598 / month	\$5,996 / month
6 people	\$4,120 / month	\$6,867 / month
7 people	\$4,643 / month	\$7,738 / month
8 people	\$5,165 / month	\$8,608 / month
<i>For each additional person:</i>	Add \$523 to the amount above	Add \$871 to the amount above

Table 1. Overview of monthly gross income limits for Calendar Year 2017.

Q8. WHEN WAS TAP IMPLEMENTED?

A8. TAP was implemented beginning in July 2017. A more detailed discussion of TAP implementation and related outreach can be found in the testimony of Michelle Bethel and RaVonne Muhammad (PWD Statement No. 7) and Joanne Dahme (PWD Statement No. 5).

Q9. HOW MANY TAP APPLICATIONS HAVE BEEN GENERATED TO DATE?

A9. As of January 13, 2018, 28,070 applications have been generated. This figure includes both applications requested by customers and those sent as part of the June 2017 mailing to assistance program enrollees and November 2017 through January 2018 recertification reminders.

1 **Q10. HOW MANY CUSTOMERS HAVE BEEN APPROVED INTO TAP?**

2 A10. As of January 13, 2018, 5,142 applications have been approved for TAP. This
3 includes applicants qualifying for TAP special hardship.
4

5 **Q11. WOULD YOU DESCRIBE THE TAP APPLICATION AND APPROVAL**
6 **PROCESS?**

7 A11. Customers have received applications in the following ways:

8 1) WRB mailed applications to customer assistance program customers in
9 June 2017, and to WRBCC customers with expiring programs through
10 February 2018. Customers did not have to request these applications.

11 2) Customers (or their representatives outside of PWD/WRB) could go
12 online and elect to print an application or have an application mailed to
13 them.

14 3) Customers could visit WRB in person, or call the WRB or PWD call
15 centers and elect to print an application or have an application mailed to
16 them.

17 4) Customers could go online and elect to fill out the application form
18 online, uploading necessary documentation.

19
20 Customers electing to fill out paper applications (printed or mailed) have 14 days
21 from the time of the request to complete the application and return it to WRB,
22 during which time enforcement is stayed. Enforcement is only stayed for three
23 applications in a twelve-month period.

24 Customers filling out paper applications (printed or mailed) mailed the application
25 to the application processing center (a service contracted through Vanguard).

22
23
24
25

Applications were scanned and data entered into the Customer Assistance Management Program (CAMP), the workflow and reporting software used by staff in the Customer Assistance Division. Data from applications submitted online automatically populated CAMP.

WRB Low Income Unit supervisors assign applications to staff for review. The review consists of evaluation of the application and verification of application data based on supporting documentation. One staff member completes a review, and then the application is reassigned to another staff member, who does an independent review. If the reviews match, the application is decided. If the reviews don't match, the supervisor is notified and she makes a final decision.

If an application is incomplete, the reviewer notes which pieces of information or documentation are insufficient for review, and a letter requesting more information is generated and mailed to the customer. The customer has 14 days to submit additional information before the application is denied for being incomplete.

For complete applications, reviewers use the CAMP interface to determine whether the customer is eligible for any customer assistance programs. If he or she is eligible, CAMP calculates and displays anticipated monthly bills under each program for which the customer is eligible, and the user approves the customer for the lowest alternative. If he or she is ineligible, reviewers deny the application and choose the appropriate reason.

1 **Q12. WHAT ADDITIONAL CUSTOMER ASSISTANCE PROGRAMS ARE**
2 **OFFERED FOR CUSTOMERS WHO DO NOT QUALIFY FOR TAP?**

3 A12. WRB offers several programs other than the Tiered Assistance Program to
4 customers who apply. All Customer Assistance Programs use the common
5 application developed as part of TAP. Completing this application allows
6 customers to be considered for all assistance programs for which they qualify.
7 Customers who do not qualify for TAP, or who are expected to have a lower
8 monthly bill under another program, are placed in one of these other programs.
9 These are:

- 10 ○ Senior Citizen Discount (available to customers at least 65 years of age
11 and earning \$31,500 per year or less; participation in this program results
12 in 25% off water, sewer, and stormwater charges).
- 13 ○ Extended Payment Agreement (available to customers above 150% FPL
14 and less than or equal to 250% of FPL; participation in this program results
15 in a payment agreement extended long enough that the customer's total
16 expected bill (water, sewer, stormwater charges plus a payment toward
17 arrears) that amounts to about 4% of the customer's household gross
18 monthly income).
- 19 ○ WRBCC (available to customers who have remained active in a WRBCC
20 plan; participation results in a flat monthly bill, but any charges above the
21 flat amount are added to the customer's arrears).
- 22 ○ Standard Payment Agreement (available to all customers with an account
23 balance, generally results in a twelve-month agreement with no down
24 payment to pay off arrears).

1 **Q13. HOW ARE CUSTOMERS PLACED IN THE BEST CUSTOMER**
2 **ASSISTANCE PROGRAM?**

3 A13. WRB representatives view and evaluate each application within the CAMP
4 software. Users validate customer income and other information. Based on
5 household size, income, and prior participation in WRBCC, CAMP highlights
6 programs for which the customer is eligible. For each such assistance program, in
7 addition to a regular bill, CAMP calculates the expected monthly bill and the user
8 chooses the lowest expected bill.

9
10 **Q14. WERE YOU RESPONSIBLE FOR DEVELOPING TAP LOST REVENUE**
11 **COST PROJECTIONS FOR USE IN THE PRIOR RATE CASE?**

12 A14. Yes, RFC developed projections for one-time start-up costs required for
13 development and implementation of TAP and ongoing lost revenue associated
14 with bill reductions provided to TAP enrollees. These costs were included in
15 revenue requirements in the prior Rate Case.

16
17 **Q15. HOW HAVE CHANGES TO THE TAP IMPLEMENTATION PROCESS**
18 **IMPACTED LOST REVENUE ESTIMATES FOR FISCAL YEAR (FY)**
19 **2018?**

20 A15. The City made several concessions during TAP implementation to benefit
21 customers either enrolled in existing customer assistance programs or enrolling in
22 programs. Primarily, these concessions included extending existing WRAP
23 benefits and extending holds on shutoffs for TAP applicants.

24
25

1 First, existing WRAP re-enrollment deadlines were extended to ensure the initial
2 influx of TAP applications could be processed. The City also extended City grant
3 awards to WRAP customers into FY 2018 to ensure re-enrollment extensions
4 would not adversely impact their ability to pay their water bills. All customers did
5 have the ability to enroll in TAP beginning in July 2017 if they thought it would
6 provide them with a lower water bill.

7
8 Second, while the City began accepting TAP applications on July 1, 2017, the
9 program did not begin enrolling qualified applicants until September 2017.
10 Acceleration of the application process was in response to requests by
11 stakeholders. The time between application acceptance and enrollment was
12 necessary to ensure that applicants would be given the most accurate information
13 regarding the disposition of their application including acceptance or denial, need
14 for additional information, and appeal procedures. Due to the time lag in
15 enrollments, the City extended shut-off holds for applicants so they would not be
16 without service while their TAP status was in process.

17
18 **Q16. HOW HAS THE CITY ADJUSTED PROGRAM ENROLLMENT**
19 **ASSUMPTIONS FOR FY 2018?**

20 A16. Due to extensions cited above, FY 2018 will not experience a full year of lost
21 revenue as originally projected in the prior Rate Case. Projections have been
22 updated based on actual data in CAMP. As of December 31, 2017, over 31,700
23 total applications for about 25,200 unique customers had been generated through
24 mass mailings, customer requests, or through a new online portal. To date
25 (January 19, 2018), approximately 11,200 applications had been submitted. As a

1 result, we now project that TAP enrollment by June 30, 2018 will be consistent
2 with the current number of submitted applications, about 11,200. The Department
3 believes it is important to project enrollment in the program and resulting lost
4 revenue based on the history of actual TAP approvals and billings. However, if
5 enrollment is higher than anticipated, financial risk is mitigated through the
6 structure of the Rate Rider.

7
8 **Q17. HOW IS THE CITY FORECASTING ENROLLMENT FOR THE PERIOD**
9 **OF THE RATE CASE?**

10 A17. The first step in updating lost revenue projections was to reassess TAP enrollment.
11 RFC reviewed the analysis for the prior Rate Case that utilized US Census data to
12 estimate the households that may meet TAP income criteria. There were no
13 significant changes in eligibility based on this analysis. However, several months
14 of enrollment history indicate a lower enrollment rate than originally anticipated.
15 Though final enrollment may meet previously projected figures, the Department
16 was comfortable reducing the rate period projection since the proposed TAP Rate
17 Rider reduces the risk of high enrollment rates and high lost revenue. Projected
18 rate period enrollment was revised to approximately 26,400 customers. The
19 Department has taken steps to ease customers into TAP by extending the
20 enrollment term for many customers in the Water Revenue Assistance Program
21 (WRAP) Water Revenue Bureau Conference Committee (WRBCC) agreements
22 through January of 2018. In addition, WRAP ten-five agreements, typically 60-
23 months agreements, that were established before July 1, 2017 are on-going.
24 Finally, customers may continue to participate in WRBCC if they maintain their
25 enrollment, and for a small percentage of customers, WRBCC remains the most

1 affordable customer assistance alternative. As a direct result, maximum
2 enrollment levels will likely be realized over a few years rather than the first or
3 even second year of the program. The table below shows enrollment increasing
4 over the period of the Rate Case to a steady level by the end of FY 2021.

5
6 **Q18. HAS THE UPDATED ENROLLMENT FORECAST CAUSED THE CITY**
7 **TO REVISE ITS LOST REVENUE COST ASSUMPTIONS FOR THE**
8 **RATE CASE?**

9 A18. Yes. Annual enrollment projections are translated to lost revenue by applying the
10 actual discounts seen on TAP bills produced in the program to date. So far, TAP
11 bills have seen, on average, a discount of \$56.98. Resulting lost revenue
12 projections by fiscal year are shown in the table below. It should be noted that the
13 average discount of \$56.98 does not currently reflect any increase in customer
14 rates or in income levels for TAP enrollees over the Rate Case. However, it is
15 anticipated that though rates will rise, the Federal Poverty Guideline will as well.

16

	Enrollment	Percent Increase	Lost Revenue
FY 2018	11,211		\$ 3,900,000
FY 2019	16,924	51%	9,800,000
FY 2020	22,981	36%	13,700,000
FY 2021	26,397	15%	17,000,000

17
18
19

20
21 Based on these updated projections, RFC recommends the estimate for FY 2018
22 lost revenue associated with TAP be revised to \$3.9 million. We further
23 recommend that the lost revenue baseline for FY 2019-2021 be set to \$9.8 million,
24 \$13.7 million, and \$17.0 million, respectively, to reflect a ramp up in program
25 enrollment. The ability to reset TAP lost revenue projections is predicated on risk

25

reduction from Rate Board’s adoption of the proposed TAP Rate Rider. Failure to adopt the proposed rider, which allows for equitable cost adjustments, will require adjustments to rate requests.

The White Paper describing this analysis is attached as Schedule RFC-4.

Q19. WHY IS IT IMPORTANT TO HAVE A BASELINE OF LOST REVENUE BUILT INTO RATES?

A19. RFC projected that TAP will reach full enrollment over the period of the Rate Case. Enrollment is the key variable in TAP lost revenue costs, so increasing enrollment translates into increasing costs year over year. The proposed TAP Rate Rider allows for eventual recovery of these costs. However, the financial strength of the utility is dependent upon costs being recovered in the fiscal year in which they are incurred. In other words, the Department may not simply incur costs in one year and recover them in the following year as it would risk violating its bond indenture for coverage and withdrawals from reserves. Therefore, it is critical for TAP lost revenue projections to mirror increasing enrollment over this Rate Case period. Adding a projected, increasing baseline for lost revenue in Rate Case revenue requirements provides the most reasonable opportunity for customers and the Department to approximate actual costs while the rate rider protects each from being placed at undue risk.

24
25

Q20. HOW DOES THE PROPOSED RATE RIDER ALLOW THE CITY TO BE LESS CONSERVATIVE IN PROJECTING LOST REVENUE?

A20. As previously mentioned, the City is obligated to meet debt service coverage obligations primarily with current year revenue. As a result, the Department must be conservative in projecting the costs of a new program so as not to put the financial position of the utility at risk. Under the proposed rate rider concept, the Department provides a reasonable projection of lost revenue associated with TAP and includes that in its rate request. Any differences between the projection and actual costs will be captured in the subsequent year’s rider calculation. While it is still likely there will be differences between the projection and actual lost revenue, the ability to capture that in the rider allows the Department to be less conservative in its calculation of the amounts to include in rates. Once the TAP program reaches steady state, projections of lost revenue will track much more closely with actual lost revenue and the criticality of the rate rider may be reduced.

Q21. WITHOUT ADOPTION OF THE RATE RIDER, HOW WOULD THE FINANCIAL POSITION OF THE WATER DEPARTMENT BE PUT AT RISK?

A21. The level of enrollment still represents a big risk in a new program like TAP. Unexpected swings in enrollment would have a huge impact on lost revenue costs, adding risk to the financial stability of the Department. The Department has minimized conservatism employed to develop its lost revenue projections embedded in the Rate Case due to the expectation of adoption of the rate rider. Without the risk protection afforded by the rate rider, a large jump in enrollment

1 would adversely impact the ability of the Department to cover expenditures and
2 meet bond indenture requirements.

3

4 **Q22. WHAT DATA WILL THE CITY BE TRACKING TO SUPPORT THE**
5 **ADMINISTRATION OF TAP?**

6 A22. The City has been and will continue to develop reports to support the operational
7 and fiscal management of TAP. Three interrelated types of reports support TAP
8 performance tracking:

- 9 ○ Daily and weekly customer assistance application processing reports
- 10 ○ Periodic cost of program reporting
- 11 ○ Annual City Council-required reports

12 In addition, other ad hoc and periodic reports to support management of TAP have
13 been requested and developed.

14 The City is using detailed data from the City's workflow and reporting software
15 for the customer assistance program unit, CAMP and detailed billing and cost data
16 from the City's water billing system, Basis2. CAMP communicates with Basis2
17 so that reporting from CAMP can draw from both systems.

18 Some of the data that the City are tracking include:

- 19 ○ Applications requested, by method requested
- 20 ○ Applications submitted, by method submitted
- 21 ○ Applications by status change
- 22 ○ Customers by program enrolled

23

24

25

1 **Q23. WILL THIS REPORTING BE MADE AVAILABLE TO CITY COUNCIL?**

2 A23. Under Philadelphia Code Section 19-1605(7), the Revenue Department is
3 required to submit, by March 31st of each year, a written report to the Mayor with
4 timely copies furnished to the President and Chief Clerk of Council regarding
5 TAP related activities undertaken during the previous calendar year. Philadelphia
6 Code Section 19-1605(7) states:

7 *(b) Each such report shall include the following information for*
8 *the twelve-month period covered:*

9 *(.1) how many applicants were enrolled in IWRAP and a*
10 *breakdown of such enrollments by income level, and the gross*
11 *amount of arrears calculated;*

12 *(.2) how many applicants were not enrolled in IWRAP and a*
13 *breakdown of the reasons for the same (e.g., lack of residency,*
14 *failure of customer to follow up, and so on);*

15 *(.3) the total number of non-IWRAP payment agreements and*
16 *a breakdown of such payment agreements by type, term, and amount*
17 *covered, which amount shall be further broken down into principal,*
18 *interest, penalties, and other fees or costs; and*

19 *(.4) the total number of IWRAP customers who defaulted*
20 *during the applicable period and the reason(s) (e.g., non-payment,*
21 *failure to recertify eligibility) for the default.*

22
23 The Department submitted a report for 2016 calendar year, which provided the
24 information in number 3 above, since the program was still under development in
25 2016. The Department will submit a report for 2017 calendar year that provides

1 all requested information and covers TAP metrics between July 1 and December
2 31 and covers non-TAP payment agreements for the whole calendar year.

3

4 **Q24. WHAT DATA WILL THE CITY BE TRACKING TO SUPPORT**
5 **CALCULATION OF THE RATE RIDER ADJUSTMENT?**

6 A24. The City will track data related to TAP revenue loss and LICAP costs to calculate
7 the TAP Rate Rider Adjustment. The revenue loss is made up of the difference
8 between the tiered assistance bill amounts and the amounts customers would have
9 been billed for regular usage and service charges (TAP discount amount) during
10 a given rate year. LICAP costs are those program costs incurred during a given
11 rate year.

12

13 The City's billing system, Basis2, records the difference between TAP bill
14 amounts and the actual amount of the regular usage and service charges each time
15 a TAP bill is generated. For example, take a single customer whose bill is capped
16 at \$12. The CAMP system communicates with Basis2 and produces a report that
17 totals the TAP discount amounts for the relevant period for calculation of the rate
18 rider adjustment.

19

20 The LICAP costs are captured via the City's financial system, FAMIS, reflecting
21 the actual payments or contract costs for administering the program.

22

23

24

25

1 SECTION 2: COST OF SERVICE REPORTING

2

3 **Q25. WHAT ADDITIONAL REPORTING HAVE YOU PROVIDED TO**
4 **SUPPORT COST OF SERVICE DEVELOPMENT FOR THIS RATE**
5 **CASE?**

6 A25. Three primary reports were developed for use in the study: 1. Service Usage and
7 Billing; 2. Water Usage and Billing; 3. Payment Patterns.

8

9 The requirements for the cost of service study reports were set forth prior to the
10 last rate setting process by Black & Veatch (B&V). At that time, B&V provided
11 detailed needs for the cost of service study reports including the source, contents,
12 constraints, timeframes, and format to be employed in each report. B&V's
13 direction was sufficiently detailed to determine the bounding constraints for the
14 data for each report given several variables such as service type, customer type,
15 installation type, etc. RFC worked with B&V and the City to refine the results and
16 provide the reporting for the rate setting process. RFC has continued to provide
17 annual reporting till the present.

18

19 The Service Usage and Billing Report comprises three tables, which provide bills,
20 accounts, consumption amounts and usage charges by service type and customer
21 category; bills, accounts, service charges by service type and meter size; and bills,
22 accounts, and stormwater usage by service type and customer category. For this
23 report, an account of interest to be counted was a unique customer at a location
24 (installation) combination, an account, with a "bill" type transaction of interest
25 (usage, service, or stormwater) in a certain month. The bill transaction is the

1 indicator of activity for that account (customer + installation combination). The
2 report provides one field for the total of all accounts of interest for the year as well
3 as the total of all accounts of interest for the year divided by 12 months (the
4 “average” for the year). The Service Usage and Billing Report is included as
5 Schedule RFC-5.

6
7 The Water Usage and Billing Report tallies the number of bills, volume of water
8 usage, and total water charges within each tier of the current rate structure by
9 Customer Category. The report includes only a single fiscal year, FY2016, and is
10 only based on data stored in basis2 as of the June 30th extract (that is, without the
11 use of revenue reporting extracts containing historical information on customer
12 types). The Water Usage and Billing Report is included as Schedule RFC-6.

13
14 The Payment Patterns Report summarizes billings for each fiscal year, and
15 payments against those billings in each of three timeframes. The report includes
16 a summary for each fiscal year, FY2012 through FY2016. In this report, billings
17 are defined as service and usage charges, with creation dates during the fiscal year of
18 interest. Billings do include all City accounts except those designated as PWD
19 accounts; they include only retail customers, excluding any wholesale customers.
20 Total billings are split between Non-Stormwater Only (Non-SWO) and
21 Stormwater Only (SWO) accounts based on the account’s installation designation.
22 Payments for accounts other than City accounts are defined as receipt or transfer
23 credits allocated to Billings. Payments are reported only when they link to specific
24 Bill transactions reported for the fiscal year in question. Payments in the ‘Billing
25 Year’ are those that were received by the end of the fiscal year in which they were

23
24
25

billed. Payments in ‘Billing year +1’ are those that were received during the subsequent fiscal year. Payments in ‘Billing year +2 and beyond’ are those that were received any time after the subsequent fiscal year.

City accounts are billed the same rates and charges as all other Water Department customers. Since the Water Department rates and charges do not maintain a separate rate schedule for City accounts and City accounts are billed the same as retail customers, collection factors for the cost of service study were developed for: Non-Stormwater Only and Stormwater Only accounts. City accounts (other than PWD accounts) categories have a 100% collection rate in the ‘Billing Year’.

For the current rate setting process, RFC updated the presentation for the Payment Patterns report to accommodate a revised rate setting period and handling of City accounts in the cost of service study. These changes are described in B&V’s testimony. The Payment Patterns Report is included as Schedule RFC-7.

RFC reports on monthly consumption for residential customer accounts to determine the ‘typical’ consumption level. PWD provides general billing information to its customers using the ‘typical’ bill as the basis for communication. Schedule RFC-8 describes the analysis and findings as of the most recent fiscal year.

For FY2017, RFC reported on typical consumption for commercial customers with 5/8” meters. RFC created this report to support the Water and Sewer Rate Board’s requirement to communicate customer impacts on small commercial

1 customers as part of the Rate Case. Schedule RFC-9 describes the analysis and
2 findings as of the most recent fiscal year.

3

4 **Q26. COULD YOU DESCRIBE THE PROCESS FOR DEVELOPING THESE**
5 **REPORTS?**

6 A26. Technical requirements were initially established for each report based upon the
7 direction from B&V as previously described. The data tables underlying Basis2
8 were examined in detail during the 2015 management audit, so we understood
9 what data elements were available in Basis2 and where those elements could be
10 found. Code was developed to query and format the reports based upon RFC's
11 knowledge of the Basis2 system as well as comprehensive explanations provided
12 by key WRB staff members involved in the day to day operation of Basis2. Each
13 report was developed over multiple iterations where B&V and staff from PWD
14 were consulted to discuss and refine results. A sufficient number of iterations were
15 completed once the report results were deemed to meet the requirements set forth
16 by B&V.

17

18 **Q27. COULD YOU SUMMARIZE THE RESULTS OF THE REPORTS?**

19 A27. Three primary reports were developed by RFC for use in the cost of service study.
20 The first report highlighted service usage and billings across the service area in
21 aggregate by customer type, service type, and meter size. This report provides
22 three fiscal years' worth of historical information on water, wastewater, and
23 stormwater charges and usage at varying levels of detail. The second report used
24 in the rate study provided water usage and billings broken into the four tiers
25 currently employed in the water rate structure. Each of these tiers was provided

1 by customer type and provided information for a single fiscal year. The third
2 report contains information on revenue collection factors as determined via billing
3 and collection data from Basis2. Three fiscal years' worth of data are provided
4 and several different collection factor metrics are provided given how data are
5 stored and recorded in Basis2. The fourth report contained information on the
6 payment patterns of each customer type. This report contained three fiscal years'
7 worth of historical data and showed how many days to payment from each bill
8 received by a customer.

9
10 **Q28. COULD YOU DESCRIBE IMPORTANT DIFFERENCES BETWEEN**
11 **THE WAY THAT THE DIFFERENT REPORTS ARE DERIVED AND**
12 **THE REASONS WHY THEY ARE DERIVED THIS WAY?**

13 A28. Depending upon the stated requirement of the report, the contents and constraints
14 could have been developed based upon different tables within the Basis2 database
15 structure. For example, water consumption information was only available in the
16 "debit lines" table whereas information on whether a transaction had later been
17 reversed was only available in the "transactions" table. Because certain tables
18 only had data relating to one theme (i.e. one table for billings, one table for
19 payments), each report had to be coded to reference and limit data based upon the
20 stated need. Three of the four reports were developed to reference historical
21 extract information on customer types and service types to best evaluate this data
22 historically. RFC endeavored to use the same bounding conditions in all reports
23 where possible so that revenue and usage information would align. Alignment and

Certifications

Series 50 Municipal Advisor

Profile

Mr. Davis joined Raftelis in 2000 and currently serves the firm as a Vice President. Mr. Davis has extensive experience in financial forecasting and modeling and has led projects to apply advanced risk analysis techniques to rate and financial planning studies for the water and wastewater industry. Mr. Davis is an active member of the Water Environment Federation (WEF) Utility Management Committee where he chairs the subcommittee on Finance and Administration. He also serves on the WEF Technical Practices Committee and the WEFTEC Planning Committee. Mr. Davis has presented at many industry conferences, and also co-authored a chapter entitled, "Financial Capability and Affordability," for the Fourth Edition of the industry guidebook, *Water and Wastewater Finance and Pricing: The Changing Landscape*. Prior to joining Raftelis, Mr. Davis worked in water resource recovery facility management and capital projects engineering.

Relevant Project Experience

Philadelphia Water Department (PA)

Mr. Davis is serving as Project Manager on a long-term contract to provide financial and management consulting services for the Philadelphia Water Department (PWD). The services involve debt issuance support, financial forecasting, service affordability review, and strategic planning assistance. At present under the agreement, Raftelis is performing a bond feasibility study and consulting engineers' report for inclusion in PWD's Official Statement for a 2016 planned bond issuance. The bond feasibility study provides a forecast of revenues and expenditures for the utility to assure bondholders that PWD will be able to repay bonds and meet debt covenants.

As part of the same engagement, Raftelis is identifying and evaluating affordability programs including customer assistance and rate structure alternatives. The affordability program development is driven by a City Council mandate to overhaul the existing customer assistance programs. To date, Raftelis has developed program structure and administration options, modeled revenue impacts of a variety of options (including ones proposed by Council and outside groups), and participated in discussions both on structure and administration leading to the implementation of a final program.

In addition, Mr. Davis served as Project Manager for a management audit of customer service functions for PWD and the Water Revenue Bureau (WRB).

DC Water (DC)

Mr. Davis currently serves as Project Manager for an ongoing engagement with DC Water. Raftelis is working under a long-term contract to provide financial planning and rate consulting services. As the first task order under the contract, Raftelis performed the 2009 Cost of Service Study (COS Study). The COS Study included four major project deliverables: assure the sufficiency of projected revenue to cover projected expenditures; calculate cost of service-based rates and compare them to projected rates; review miscellaneous fees and charges; and, recommend rate structure alternatives that enhance priority pricing objectives of DC Water. Raftelis worked closely with DC Water staff over a compressed project timeframe beginning in July, 2009. Results of the COS Study, along with a comprehensive report and revenue sufficiency/cost of service model, were presented to the Retail Rates Committee of the Board on September 24, 2009. Raftelis will continue to develop rate structure options based on the recommendations in the study.

Columbus Water Works (GA)

Mr. Davis has served as Project Manager on a multi-phase project with Columbus Water Works (CWW) involving a financial management systems evaluation, cost of service analysis, block rate design, contract rate analysis, and financial reporting system review. The project goal was development and implementation of equitable yet understandable cost-based rate structures for both inside city and contract customers. The task was complicated by the recent departure of several large contract and wholesale customers and major looming capital needs. The study used a 5- to 10-year planning horizon that incorporated long-term capital planning needs, debt funding assumptions, operating cost

projections, and demand projections. The Water Works Board voted on and agreed to the five-year program as recommended by Raftelis and CWW staff.

City of Baltimore (MD)

Mr. Davis serves as Project Manager on a multi-year cost of service, rate, and financial consulting contract for the City of Baltimore (City). As part of the contract, Raftelis is performing cost of service and rate design studies for the water and wastewater utilities. The contract also calls for assistance with long-term fiscal planning and development of financial plans for utility capital programs. Since the City provides wholesale and retail utility service for surrounding counties, the engagement includes inter-jurisdictional contract negotiation support and rate setting. Mr. Davis is responsible for project administrative functions such as invoicing and sub-consultant coordination over the term of the engagement.

Washington Suburban Sanitary Commission (MD)

Mr. Davis served as Project Manager on an engagement with Washington Suburban Sanitary Commission (WSSC) in Laurel, Maryland. WSSC is looking at alternatives to fund infrastructure renewal and AMR/AMI. The Raftelis Team is identifying and evaluating revenue enhancement opportunities to help fund approximately \$2.1 billion in incremental capital projects over the next ten years. As part of our assistance, the Raftelis Team is helping to build the business case for monthly customer billing facilitated by AMR/AMI. WSSC has looked into automated meter reading for at least 12 years but has run into challenges with cost justification; their system contains over 440,000 customer accounts and almost 1,000 square miles. The Raftelis Team, led by Mr. Davis, will help to justify the investment in AMR/AMI through placing a value on its intangible benefits: more frequent pricing communication with customers, reduced delinquency, and reduced unaccounted for water.

City of San Diego Metro Wastewater Department (CA)

Mr. Davis served as Lead Consultant for a sewer cost of service and rate design study for the City of San Diego (City) Metro Wastewater Department. The study was conducted with extensive stakeholder group involvement and included a comprehensive review of the City's revenue requirements and allocation methodology, review of the City's user classification, an analysis of cost of service and rate design for City users. Rate design included evaluation of rate structure alternatives with emphasis on incorporating a uniform monthly base fee in conjunction with volume rates. The study also included a review of the City's capacity charges.

Charlotte-Mecklenburg Utilities (NC)

Mr. Davis has assisted on several financial services engagements for Charlotte-Mecklenburg Utilities (Utilities). Originally, Raftelis assisted Utilities in developing a water financial planning and rate model and related user manual. The rate model has been used to update rates and assist with Utilities' financial planning. Since the original model development, Raftelis has provided assistance in updating and refining the rate model. In addition, Mr. Davis and Raftelis have provided assistance in conservation-based rate development, industrial waste charge methodology, recycled water rate setting, managed competition, and utility billing system cost allocation. Raftelis is currently assisting Utilities in

developing stronger conservation-based water rates, while trying to maintain revenue sufficiency and stability.

Richmond Department Public Utilities (VA)

Mr. Davis currently serves as Project Director for our engagement with the Richmond DPU. Raftelis is developing a financial planning model that incorporates all utility systems: water, wastewater, natural gas, street lighting and storm water. DPU will use the model to set rates in addition to determining financial condition.

City of Virginia Beach Department of Public Utilities (VA)

Mr. Davis served as the Project Manager on an engagement looking into the feasibility of transitioning the Department of Public Utilities (DPU) from bi-monthly billing to monthly billing. DPU leadership was concerned that non-utility fees added to the utility bill would incite a public outcry for monthly billing. DPU wanted to be prepared to address this with two scenarios: an analysis of the most expedient method to enact monthly billing in the short term; and an analysis of the most efficient method to enact monthly billing in the long term. The Raftelis Project Team examined customer service functions related to monthly billing including meter reading, customer information systems, collections, and account management. These functions were split between the Operations Division, which handled field activities, and the Business Division, which handled customer account maintenance and call center operations. As a result of this project, DPU was able to identify both short-term and long-term approaches to meet its monthly billing transition.

York County (SC)

Mr. Davis served as Project Director on a wheeling rate study for York County, South Carolina (County). The County engaged Raftelis to calculate a wholesale or bulk rate for water purchased by the City of York and Tega Cay from the City of Rock Hill to be delivered through the County transmission system. The study involved developing a cost allocation methodology and associated rate for delivering water through the County system that considered alternative options for the assessment of capital costs.

City of Buffalo (NY)

Mr. Davis served as Project Manager for a comprehensive cost of service and rate study for the Buffalo Water Board (Board). The Board's primary pricing objectives were revenue sufficiency and equitable cost recovery from all customer classes. To achieve these objectives, Raftelis performed a cost of service study and developed two alternatives to the existing three-block, declining block rate structure. The results of the cost of service study indicated that the discount being realized by large volume customers was not cost justified and that only a minor portion of consumption was within the middle rate block. Raftelis recommended a phased approach to bringing the discount for consumption in the third rate block closer to a cost justified level and phasing out the middle rate block. Both the Board and the City's Common Council unanimously approved Raftelis' recommendations.

Profile

Ms. Locklear has 13 years of experience in local government finance and stormwater management. She specializes in working with local government staff, stakeholders, and elected officials to identify solutions and implement programs to meet environmental and public health challenges. Ms. Locklear is experienced in governmental financial analysis and planning, particularly in stormwater utility implementation and rate studies. She is also experienced in all aspects of utility implementation, with particular focus on policy analysis and development, and data and billing system implementation. She has studied fee credit programs and served as project lead on credit program development for several large stormwater utilities. Ms. Locklear has worked with more than 50 local governments on stormwater funding analyses, fee feasibility, or implementation projects and has served as project manager for more than 15 stormwater utility fee implementation projects. She was a member of the working group that developed the certification test for APWA's Stormwater Manager Certification. She was also a reviewer for the Water Environment Federation's Special

Henrietta Locklear
Raftelis

Publication entitled, *User-Fee-Funded Stormwater Programs, 2nd Edition*. In addition, Ms. Locklear co-authored two chapters in the industry guidebook *Water and Wastewater Finance and Pricing: The Changing Landscape*, which are entitled, "Public Outreach and Gaining Stakeholder Commitment" and "Expanding Financing and Pricing Concepts into Stormwater." Ms. Locklear has a wealth of experience with public input processes. On a variety of projects, she has developed and facilitated public stakeholder processes, outreach strategies, and education campaigns for programs ranging from stormwater utilities and NPDES compliance efforts to brownfields, on-site wastewater, and hazard mitigation programs. Her strengths include: policy analysis and development; research methods, including survey development and administration; data analysis; local government finance; stakeholder facilitation; and strong written and oral communication skills. Recently, she has also focused on developing utility customer assistance and affordability programs.

Project Experience

Philadelphia Water Department (PA)

Ms. Locklear manages several efforts for Raftelis' engagements with PWD. These include the development of the City's affordability program and a management study of the utility's meter-to-cash operation and annual reporting efforts to support the department's financial planning and cost of service studies. For the management audit, she oversaw the review of customer service and billing processes as well as a detailed analysis of the utility's billing system. She is also assistant project manager for Raftelis' multi-year engagement with the Department to provide financial consulting services.

City of Baltimore (MD)

Ms. Locklear served as one of the project leads for a complex and fast-paced project to implement a stormwater fee for the Bureau of Water and Wastewater with the City of Baltimore. She was the architect of the project approach covering all aspects of required elements for implementation. The City sent its first stormwater bills in October of 2013 and Ms. Locklear has continued to assist the City with customer service, billing system and policy topics to the present.

Pinellas County (FL)

Ms. Locklear led the development of the business case for Advanced Metering Infrastructure (AMI), monthly billing, and rate structure changes. Pinellas County (County), located in the Tampa-St. Petersburg area of Florida, provides potable water, wastewater, and reclaimed water service throughout its utility service area. The County engaged Raftelis in January 2014 to conduct a comprehensive utility business and rate sustainability analysis to provide a comprehensive road map for the County utility over the next decade in terms of customer service, technology, rate structure, and

Henrietta Locklear
Raftelis

sustainability. The business case initiatives include evaluation of the billing cycle (currently bi-monthly), the potential for automating the meter reading process, and other technology and process improvements. Another part of the project, focused on rate sustainability, included development of a comprehensive 10-year financial forecast and evaluation of existing rate structures for equity, revenue sufficiency, and long-term sustainability.

Based on the need for a comprehensive analysis of the factors involved in changing the utility's business model, Ms. Locklear lead workshops to define over 80 cost variables involved in the transitions. The results of the workshop were rolled into a detailed, flexible model that allowed for a variety of scenarios (from conservative to not conservative) to be modeled for seven business case scenarios and the best, worst, and expected costs and benefits for each. The model provides a 20-year net present value to the utility for each case. Ms. Locklear vetted the model with staff, employing collaborative work with stakeholders throughout the business case development. The results were explicated in a detailed report in late 2014 and presented to the core group and the County management team. The report, including the long-term road map for utility enhancements and rate recommendations, was finalized in early 2015 and presented to the Board of County Commissioners.

Granville-Person Cooperative Stormwater Services (NC)

Ms. Locklear served as project manager for implementation of an innovative multi-jurisdictional utility in a group of jurisdictions affected by nutrient-sensitive waters rules. The three municipalities and two counties that make up the collaborative group differ in population, population density, land use/land cover, and current and planned level of service provision. The project thus involved complex policy development around rate structure, organizational structure, and other issues.

In addition, Ms. Locklear now serves as the Stormwater Utility Services Manager for the group of jurisdictions to assist with coordination and regulatory compliance. Her duties included assisting the local governments with compliance for the Falls Watershed nutrient management strategy rules. She has served as the manager since 2013.

County of San Diego (CA)

Ms. Locklear served as project manager for a study of the County's funding strategies to meet new, stringent regulatory requirements for stormwater. The study includes analysis of an array of options including county-only and regional funding alternatives that would include the jurisdictions within the County, co-permittees under a single water quality permit. The study involves coordination with the co-permittees as well as extensive data analysis, development of a financial model and implementation plan for the recommended strategy.

City of Sacramento (CA)

Raftelis was engaged by the City to develop rate structure alternatives for the City's water, wastewater, and stormwater drainage rate structures. Ms. Locklear oversaw the development of the stormwater drainage rate structure alternatives and modeling, including more than five alternatives. She oversaw the development of the potential rates from each and for modeling the City's favored rate structure alternative. Raftelis' findings were compiled in a report, and Ms. Locklear contributed to presentations to stakeholders and staff throughout the project on the storm drainage fee alternatives.

City of Richmond (VA)

Since 2007, Raftelis has been engaged by the Department of Public Utilities (DPU) as its financial and rate consultant. Ms. Locklear lead the review of a potential stormwater fee structure change under the City's consideration. Since the rate structure posed issues of public acceptance as proposed, Ms. Locklear developed additional, more palatable alternatives for the City's consideration. The analysis involved a detailed impacts analysis for customers. Ms. Locklear assisted with presentations to staff on the alternatives, the selected alternative and the potential rates for the current stormwater financial plan.

Ms. Locklear is leading an assessment of reporting capabilities, gaps, and needs for DPU. The goal of the assessment and Raftelis recommendations is to enable staff to streamline reporting and facilitate strategic activities within the Department. The assessment is ongoing.

Henrietta Locklear
Raftelis

Adams County (CO)

Ms. Locklear managed an engagement with Adams County to complete a Stormwater Utility Credit Study, of which the outcome was to develop guidelines, policies, and procedures for offering utility fee credits to customers in the Adams County Stormwater Utility. The team completed a preliminary review of the stormwater program and utility documentation, financial materials, billing data, and the Stormwater Management Task Force meeting materials and minutes. Following this review, Ms. Locklear visited sites around the utility service area that were representative of existing stormwater management or special drainage conditions. Ms. Locklear summary of these site visits and an overview of available credit types were presented to utility staff and the County board along with the preliminary Raftelis recommended program structure. Ms. Locklear used program costs and other data to determine maximum available credits and estimate the revenue impacts of implementing the program. Raftelis recommended that the utility implement a limited credit program, focused primarily on incentivizing treatment practices that result in improved water quality or reduced peak flow or runoff volume. Recommendations were based on analyses of the utility's costs and a determination of which costs have the potential to be reduced through customers' stormwater treatment or activities, and which costs could not be further reduced through these means. Finally, Ms. Locklear estimated the potential revenue impact of implementing the recommended credit program.

City of Charlotte (NC)

Raftelis' most recent engagement, with the City of Charlotte, has been to assess the City's program including comparing the program with those of other utilities nationwide. Ms. Locklear lead the assessment, which included reviews of program policies and finance, including funding methodology. One focus of the assessment was on the City's Maintenance and Repair program which is the portion of the City's capital improvement program that resolves drainage complaints from citizens. The program has a large backlog of projects and the City sought to analyze the program and the best solution to resolve the backlog, including potential level of service, policy and funding changes. As a part of the study, Raftelis performed analysis of debt funding options over 10-year and 20-year planning horizons as one option to increase investment to meet capital needs. Raftelis provided the broad assessment of the program's health, identified chief challenges for the future and recommended strategies to meet those challenges. Raftelis provided presentations to Council and to the program's citizen stakeholder committee on the study and results.

City of Raleigh Public Utilities Department (NC)

In March 2012, the City of Raleigh contracted Raftelis to conduct a comprehensive organizational analysis and development study for the City's Public Utility Department within a 20-week time frame. For several years, the City has been discussing whether to relocate its stormwater utility from the Public Works Department to the Public Utilities Department. The move could have far-reaching effects on the relationship between stormwater and transportation, the efficiency of planning, design and engineering activities, regulatory compliance, and customer service management. Ms. Locklear is one of the project leads on the Raftelis team. With extensive knowledge of and experience in the field of surface water management, the Raftelis team was asked to compile, measure, and analyze the costs and benefits of relocating the utility. As this data would inevitably be presented in both qualitative and quantitative formats, Raftelis conducted both types of analysis to arrive at its recommendation. Finally, Raftelis has reported its findings to the leadership of Public Utilities, Public Works, and the City of Raleigh.

In addition, Ms. Locklear is currently serving as Project Manager for on-call stormwater services contract. In this position, she serves as lead for tasks including benchmarking study of the City's program.

Northeast Ohio Regional Sewer District (OH)

Ms. Locklear assisted in the Data Track of the project to develop a user fee to support Northeast Ohio Regional Sewer District's (NEORS) stormwater management program. Once implemented, the stormwater management program will serve 61 municipalities and two counties that are part of NEORS's service area. She developed policy documentation for the utility's data management. Ms. Locklear also assisted in a variety of tasks to support the development of a user fee to support the NEORS's stormwater management program. She has performed policy analysis and documentation and data analysis to support program implementation and billing and data development. She also supervised additional documentation and analysis and peer reviewed project deliverables. As Project Manager, Ms. Locklear has overseen project management for NEORS, reviewing charges, invoicing, and subcontractor

Henrietta Locklear
Raftelis

invoicing in compliance with NEORSD standard procedures. She managed both data development and data quality control tasks as supervisor of the data and policy analysts performing tasks such as parcel aggregation and database development.

Ms. Locklear is currently serving as Assistant Project Manager for the billing implementation phase of this project. In this capacity, she has led policy review and development and prepared and reviewed deliverables.

City of Dallas (TX)

Ms. Locklear is serving as Assistant Project Manager for the study and implementation of a stormwater rate structure change for the City of Dallas (City). The City implemented a stormwater fee in 1991 that generates about \$49 million annually. The rate structure change represents a significant effort on the part of the City to assure the financial stability of its Storm Drainage Fund, recover costs more equitably from its ratepayers, and to do both in a transparent fashion. If implemented, the updated rate structure embodies a considerable change, not only for ratepayers receiving changed bills, but also for the City's business processes for billing and account maintenance. Raftelis is tasked with determining the stormwater cost of service and developing the stormwater financial plan. Raftelis will also be updating available impervious area data and evaluating potential rate structures. We will be performing an account review and evaluating the impacts upon customers of a rate structure change. In addition we will evaluate the billing mechanism and perform account to parcel matching. Raftelis will assist the City with necessary rate ordinance changes and with public outreach around the rate structure changes. Raftelis will be assisted by subcontractors K Bealer, Pacheco Koch Consulting Engineers, and Ware and Associates.

Town of Kernersville (NC)

Ms. Locklear served as Project Manager for the development of a strategic plan for the Town's stormwater program. The plan development involved a series of workshops with staff throughout the Town that touch the stormwater program and the development of a comprehensive plan to drive the program over the next five years. Her team is currently conducting a review of the Town's stormwater billing data and providing recommendations on bringing the data up to date. Previously, Ms. Locklear led a project to review the Town's stormwater program. She conducted interviews of stormwater, public services, and Town administrative staff to document stormwater program details. She then analyzed the program for compliance with NPDES requirements and is in the process of compiling results. The project also involved developing a written procedure for the annual stormwater billing update for the fees, which are conveyed on Guilford and Forsyth Counties' tax bills.

City of Tacoma (WA)

Ms. Locklear served as Technical Reviewer of the stormwater cost allocation study as part of a water, wastewater, and surface water rate study. In this role, she provided guidance on cost allocation methodology.

Town of Mooresville (NC)

Ms. Locklear served as Project Lead for a feasibility study for the Town of Mooresville. Tasks included development of stormwater program existing and future costs, including staffing, hourly equipment costs, and capital program costs. She assisted with development of rate base estimate and fee estimations. She developed stakeholder process meeting materials and presentations, and led stakeholder meetings.

City of Charlotte and Mecklenburg County (NC)

Ms. Locklear serves as Project Manager for strategic planning in support of business process improvements for all business processes that relate to stormwater utility billing, collections, database maintenance, and customer service. The outcomes from this project will support improvements in the connectivity between the third-party billing vendor and the stormwater utility and among the departments serving stormwater customers.

In addition, Ms. Locklear served as Project Manager for the analysis of residential rate structures and crediting options for this well-established stormwater utility. She developed options and analyzed rate implications and pros and cons of

Henrietta Locklear
Raftelis

various options. She also presented initial options to the Storm Water Advisory Committee (SWAC), responded to comments, presented revised options to SWAC, and developed handout materials for SWAC and final report for staff.

Philadelphia Water Department (PA)

Ms. Locklear served as project key lead for a study assessing potential changes to PWD's stormwater fee rate structure, credits regulations, and green infrastructure incentives. The project involved a detailed assessment of the Department's then current rate structure and program, a national credit and incentives study of comparable utilities, as well as an intensive stakeholder input process. Ms. Locklear led the national credits study and coordinated the stakeholder process, including policy development and assessment. Ms. Locklear also oversaw data analysis inputs into the stakeholder process.

Town of Butner (NC)

Ms. Locklear served as Project Manager for a stormwater management program development project for the Town of Butner (Town). The Town is subject to both NPDES Phase II rules and the recently mandated Falls Lake Nutrient Management Strategy, which is considered to be one of the strictest set of nutrient management rules in North Carolina. Ms. Locklear developed a five-year stormwater program plan, prepared the Town's NPDES Phase II permit application, and assisted in presentation of each of these to Town Council for approval. As part of the project, Ms. Locklear developed planning level costs for the program and then assessed options for funding the program plan. The Town is currently weighing these options.

Tri-Cities (TN) (Bristol, Elizabethton, and Johnson City/East Tennessee State University)

Ms. Locklear co-authored Notices of Intent for renewal of MS4 NPDES Phase II permits for three northeast Tennessee cities, one of which was a co-permitted application with East Tennessee State University. To complete the NOIs, Ms. Locklear reviewed current programs with each of the permittees, consulted with the regulator on acceptable BMPs, developed best management practices and measurable goals for each permittee, and developed Public Information and Education plans (PIE plans) for each permittee. Ms. Locklear also coordinated the co-permitting information and development of BMPs between Johnson City and ETSU, and coordinated the on-time submission of NOIs, submitting one on behalf of a permittee.

City of Wilmington (NC)

As Project Manager for a rate study of a 10-year old stormwater utility in eastern North Carolina, Ms. Locklear developed a program cost of service for the seven-year analysis period as well as a rate model, and performed rate modeling. Issues considered in the cost of service projections and rate model included uncertainties in costs related to regulatory compliance and landfill fee. The utility funds an aggressive capital improvements program and all modeling was performed in compliance with the City's conservative cash management principals and with existing revenue bond covenants. Ms. Locklear drafted the cost of service report and rate study report.

Lexington-Fayette Urban County Government (KY)

Ms. Locklear was peer reviewer for the development of a user fee to support LFUCG's stormwater management program including review of policy documentation.

City of Tega Cay (SC)

Ms. Locklear was Project Manager for development and implementation of the stormwater utility for the City of Tega Cay. In this role, she coordinated program review and finalization, crediting process, cost of service analysis, rate structure and rate study reports, rate ordinance and enterprise fund establishment, data development, and public relations assistance. She also served as client manager overseeing annual updates to the billing file for annual stormwater fee billing.

City of Aspen (CO)

Ms. Locklear performed an analysis of current regulations and the degree to which development standards encourage green stormwater practices. In addition, she performed reviews of draft manual chapters.

Henrietta Locklear
Raftelis

City of Manchester (NH)

Ms. Locklear was Project Manager for development and implementation of the stormwater utility for the City of Manchester. In this role, she was responsible for reviewing policy papers related to data issues, as well as ensuring timely deliverables and financial control of the project.

Wake County Department of Environmental Services (NC)

As Project Manager, Ms. Locklear was responsible for a multi-faceted project to implement the recommendations of a countywide, multi-jurisdictional stakeholder group that recently completed its work. The project involved several disparate elements: facilitation of a stakeholder group tasked with developing a multi-jurisdictional post-construction ordinance, development of a risk-based methodology for erosion control enforcement, and an innovative pilot basin model that would help the County test development scenarios. In this role, she oversaw the coordination and management of a stakeholder group; conducted research on risk factors for construction site erosion, channel protection methodologies, and other stormwater concerns; conducted interviews with local key stakeholders including stormwater staff, regulators, and members of the real estate community; and supervised modeling schedule, technical review and input, and publicization.

City of Jacksonville (NC)

As Project Manager for year-long management consulting project to assist the City departments, Ms. Locklear was responsible for stormwater compliance activities with organization, scheduling, tracking of activities, and reporting to enable the City to comply with its NPDES phase II permit. The project also included education sessions for Council, assistance with the creation of the City's stormwater ordinance to include construction and post-construction requirements, and coordination with the Unified Development Ordinance revisions process.

Southeast Metro Stormwater Authority (CO)

Ms. Locklear served as Project Manager for a project to identify and describe potential credits and other fee-reducing actions that could be undertaken by the Southeast Metro Stormwater Authority (SEMSWA) stormwater utility in Englewood, CO. This analysis included a qualitative screening of the pros and cons of credits, an examination of the financial implications of adopting credits, a presentation to the Board of SEMSWA about the options, and development of credit application policies and procedures chosen by the Board. Ms. Locklear managed the project, wrote the qualitative and quantitative analyses, and presented to the Board of SEMSWA.

Georgetown County (SC)

Ms. Locklear was Project Manager for development and implementation of a stormwater utility for Georgetown County. In this role, she coordinated the program review and finalization, crediting process, cost of service analysis, rate structure and rate study reports, rate ordinance and enterprise fund establishment, data development, and public relations assistance. In addition, she ensured timely deliverables and financial control of the project and responded to requests for follow-up on work for MS4 program implementation and program management.

City of Cartersville (GA)

As Project Manager for the implementation phase of the City's stormwater utility, Ms. Locklear developed a public education and outreach campaign. Her responsibilities included writing public education and outreach plan and carrying out the plan. She created content and oversaw design of public education materials such as brochures, and drafted stakeholder policy papers and meeting presentations. Ms. Locklear coordinated timely delivery of materials and meeting follow-up tasks.

City of Bettendorf (IA)

Ms. Locklear was primary researcher and writer of technical, informational papers for use by staff to present to council on policies and designs of infiltration practices nationwide. Topics were: the use of infiltration practices to reduce required detention volume and utility credits for infiltration practices.

Metro Water Services of Nashville and Davidson County (TN)

Henrietta Locklear
Raftelis

As Task Manager on Phase II of revisions, Ms. Locklear's responsibilities included drafting manual revision language and BMP designs and communicating with client and stakeholders on responses to revisions. Train staff and assist Metro with training for development community on new manual. She assisted with Phase I of revisions including facilitation of staff technical review and public stakeholder groups for Metro Water Services, Stormwater Division. Responsibilities included developing policy options for discussion, review, and modification or adoption by stakeholders groups; coordination of group meetings including distribution of meeting materials, facilitating communication among group members, and fielding and addressing group member concerns; addressing policy concerns from multiple agencies including Metro Planning, Public Works, Public Health, Legal and state environmental agencies. In addition, Ms. Locklear revised the stormwater management manual based on stakeholder and staff process.

Knox County (TN)

Ms. Locklear assisted with Stormwater Ordinance and Manual Revisions for the County. Her responsibilities included conducting policy research and development; formulating policy alternatives and recommendations; drafting white papers on policy research and recommendations and drafting stormwater management manual chapters.

Local Government Program Development and Environmental Compliance Assistance

Wake County (NC)

Ms. Locklear served as Project Manager for a follow-on project to implement recommendations made by a stakeholder group facilitated by an earlier project, tasked with developing an action plan for County on-site wastewater program. The project included development of a plan for implementing the recommendations of the stakeholder group, including options for providing public education and outreach, making changes to County on-site wastewater rules, managing data collection on on-site wastewater systems, and developing a financial framework for the plan. Ms. Locklear provided assistance in implementing some of these recommendations, such as drafting rule changes. To assist in implementation of one of the committee's public education recommendations, Ms. Locklear designed brochure templates to be distributed by the County to residents using on-site wastewater systems.

In addition, Ms. Locklear was Project Manager and facilitator for a project to lead a stakeholder group tasked with developing an action plan for the County on-site wastewater program. The year-long process involved identification of needs and issues and development of a plan to meet the needs and issues, and support of budget requests to support the action plan.

Ms. Locklear was also Project Manager and client contact for program and funding study of options for expansion of on-site wastewater management program. The study led to follow-on projects during which Ms. Locklear facilitated a stakeholder group that recommended an expanded on-site wastewater system management program.

Texas Army National Guard, various sites in TX.

Ms. Locklear conducted site visits for updating Spill Prevention Control and Countermeasure Plans in compliance with local, state, and federal regulations. Collected and updated information on personnel and facility characteristics through interviews, digital photographs, GPS points (using Trimble unit), inventory of materials, and an examination of the site.

Brownfields Assessment

City of Concord (NC)

Ms. Locklear provided public education assistance to the City in the implementation of its Brownfields Assessment Grant.

City of New Bern (NC)

Ms. Locklear led public education and outreach track for the City including finalization of public input plan, coordination and production of public outreach materials and leading public stakeholder group (Brownfields Steering Committee). In addition, she assisted the City in writing another EPA grant application, for area-wide planning for Brownfields Programs.

Hazard Mitigation and DFIRM

City of St. Augustine (FL)

Henrietta Locklear
Raftelis

Ms. Locklear facilitated the outreach project strategy stakeholder group and developed documentation in support of the City's CRS program. Through the project, the City obtained an upgrade in its CRS classification from an 8 to a 7. Ms. Locklear also assists on additional CRS credit activities such as the development of outreach materials.

State of North Carolina, Raleigh (NC)

Ms. Locklear was Project Manager for an innovative project to derive finished floor elevations in five sea level rise risk counties using mobile scanning (terrestrial LiDAR) field data for buildings inside the 0.2% annual chance floodplain and using a statistically-derived algorithm for buildings outside the floodplain. In addition, her team performed quality control field measurements of coastal structures.

In addition, Ms. Locklear was Assistant Project Manager for statewide aerial photography acquisition and orthophotography production for 48 of 100 North Carolina counties. She was responsible for subcontractor management and contracting, client invoicing, scope and budget control.

State of Alabama

Ms. Locklear developed content for user-guided multimedia training CD and web application. Topics included general information on flooding and floodplains, as well as the NFIP, flood studies, map modernization and floodplain management. The intended audiences for the training were local government officials. Media collected and/or created included text, illustrations, animated sequences, sounds and songs, and pictures. Ms. Locklear coordinated creative development of curriculum themes and design.

Other relevant experience

NPDES Phase I or II Permit Implementation Assistance, Various Clients

Ms. Locklear provided program assessment, developed new program component, provided training and carried out public education, involvement and other activities as staff extension.

Certifications

Series 50 Municipal Advisor

Experience: 6 years

Career Highlights:

- Stormwater Consulting experience with Philadelphia, Baltimore, Dallas, Richmond, Northeast Ohio Regional Sewer District, multi-jurisdictional stormwater programs and utilities
- Contributing editor of the WEF Manual of Practice 27: *Financing and Charges for Wastewater Systems*
- Municipal Advisor Representative qualified through the Municipal Securities Rulemaking Board

Profile

Ms. Fitts has a strong background in water resources and utility management, and possesses extensive data management and analytical skills. Her educational background lies in the areas of water quality, hydrology, and resource conservation. In her six years with Raftelis, she has consulted with numerous local governments on projects related to stormwater program development and review, and stormwater utility feasibility, development, implementation, and reorganization studies. Ms. Fitts has also worked with water and sewer utilities on a wide variety of projects – from rate development and affordability analysis to revenue loss investigations – all with the common thread of being driven by existing utility data and designed to positively impact utility performance and management. Ms. Fitts has worked extensively with GIS data and systems and with relational databases in association with water, wastewater, and stormwater utility projects. In addition to her analytical work, she has a strong

knowledge of municipal finance, and serves as a Municipal Advisor Representative, which ensures her fiduciary responsibility to clients. Ms. Fitts was also a contributing editor of the WEF's *Manual of Practice No. 27: Financing and Charges for Wastewater Systems*.

Relevant Project Experience

Northeast Ohio Regional Sewer District (OH)

The Northeast Ohio Regional Sewer District (NEORS) in Cleveland, OH provides wastewater service to over 50 communities in the region. In early 2013 it began billing for stormwater service to the entire region as well. Raftelis worked with the District through every step of the stormwater utility design and implementation process. Ms. Fitts developed policy documentation for the utility's data management, customer service, credit program, inspection and maintenance program, and billing. In addition, Ms. Fitts assisted with GIS data analysis, billing database development, and project management.

Upper Falls Watershed Multi-Jurisdictional Stormwater Utility (NC)

Five jurisdictions in the Falls Lake Watershed of central North Carolina engaged Raftelis to address pressing stormwater management issues across the region through the implementation of a coordinated stormwater funding mechanism. Raftelis worked with the jurisdictions to create a rate structure that would most appropriately and feasibly fund the planned level of service provision. Raftelis worked with each jurisdiction to determine the current and future costs associated with stormwater services and to set rates. Raftelis also assisted the jurisdictions in coordinating service activities for maximum cost savings. Raftelis developed the utility billing data for each jurisdiction, assisted them with determining the best billing and collection method (County tax bill line item), and coordinated with the County tax offices to implement the billing methodology. Raftelis also worked with the jurisdictions to develop a credits policy, as well as assisting them with extensive public and elected board meeting support and customer service representative training. The project involved complex governance, service provision, rate structure, and billing policy issues. Ms. Fitts was involved in many aspects of complex policy development around rate structure, organizational structure, customer outreach, and other issues.

City of Raleigh Public Utilities Department (NC)

Raftelis conducted a comprehensive organizational analysis for the City of Raleigh Public Utilities Department to determine whether to relocate its stormwater utility from its existing organizational home as a division of the Department of Public Works. The assessment considered the relationship between stormwater and transportation, the efficiency of design and engineering activities, the future of regulatory compliance, and best means for customer service management. The Raftelis team was asked to compile, measure, and analyze the costs and benefits (in both quantitative and qualitative measures) of relocating the utility. The project involved extensive stakeholder input, with individual department meetings, two staff roundtable meetings, and two meetings with citizen stakeholder groups. Ms. Fitts assisted with stakeholder feedback sessions, design and execution of the analysis, and benchmarking efforts designed to create the most effective organizational structure of the utility.

City of Baltimore (MD)

Raftelis was engaged by the City of Baltimore (City) as its stormwater program implementation manager. The first major task was to assist the Bureau of Water and Wastewater (Bureau), within the Department of Public Works, with the implementation of a new stormwater fee and stormwater utility. Raftelis conducted a quick assessment of the Bureau's readiness to implement the utility, scoring the Bureau on seven major implementation areas. This quick assessment was followed by an in-depth gap

analysis. One of the results of the gap analysis, in addition to a detailed assessment of the Bureau's current capacity for implementation, was a timeline for implementation, with the timing of tasks to be accomplished. The stormwater fee is slated for a go-live billing date of July 2013. Raftelis will assist the Bureau with all aspects of implementation from data development and custom software needed for customer service provision, to policy, process development, financial, program, and outreach tasks. The project included extensive policy and process development, data quality control measures, and organizational management on an expedited timeline in order to meet an existing utility go-live date. Ms. Fitts conducted reviews of existing policy and processes, as well as review and revision of the City's geographic data relevant to stormwater management.

Beaufort County (SC)

Beaufort County, SC and the underlying municipalities have been cooperating in a multi-jurisdictional utility for several years. In advance of three of the participating jurisdictions being issued MS4 permits, Raftelis was included in a multi-faceted project to develop a notice of intent, conduct a rate structure analysis, and develop rates and an associated financial strategy over a five year planning period supportive of the enhanced program. Ms. Fitts assisted the County with development and submittal of its MS4 permit Notice of Intent. After assisting with program visioning and cost development for each of the five jurisdictions, Ms. Fitts created a tool for the County and the municipalities to model several different rate structure options, including different ways for shared costs to be divided among the jurisdictions and conveyed to customers. The model also allowed the County and the municipalities to plan capital project work by observing the feasibility of debt issuance and its impact on rates.

City of Dallas (TX)

The City of Dallas engaged Raftelis for a dual-track approach to updating the efficiency and efficacy of the mature stormwater program. First, Raftelis conducted a thorough review of the stormwater program and financial strategies in support of restructuring the stormwater utility billing mechanism and developing a revised rate structure. Second, Raftelis assisted in assessing and modifying tools and systems in use within the stormwater regulatory compliance group. Ms. Fitts oversaw billing data development, led the policy revision efforts, and assisted with City outreach related to an updated approach to stormwater billing. Ms. Fitts also assisted with the documentation of staff needs and resource gaps to facilitate updating the City's internal systems and processes.

City of Philadelphia (PA)

The City of Philadelphia engaged Raftelis to conduct a thorough audit of its "meter to cash" operation, comprising functions in at least four different City departments. The comprehensive project worked toward aligning the inter-departmental processes and identifying opportunities for efficiencies and cost savings throughout the utility, and ultimately increasing realized revenues. Ms. Fitts conducted numerous interviews of staff and management with regard to customer service processes, back-office functions (payment processing, bill print and mailing, etc.), collections, billing system support, data integrity, and affordability programs and synthesized these findings along with the results of a benchmarking of industry standards to provide meaningful recommendations to the City.

City of Jackson (MS)

During a transition from an outdated utility billing system to a more modern billing application, the City engaged Raftelis to analyze the existing billing data and processes to discover why expected revenues were not being realized, and to assist with remedying any identified errors prior to transitioning to the new system. As a separate component of the project, Raftelis performed a rate

study for the City to ensure revenue sufficiency over the planning period. Ms. Fitts analyzed billing data and identified several divergences from stated billing policy to be remedied through immediate programming updates in the existing billing system, or to be addressed during conversion. Ms. Fitts also used the available historical data to quantify revenues and detail consumption patterns over previous years as a critical input into the rate study.

Carlisle Borough (PA)

Raftelis was engaged by the Borough of Carlisle to provide assistance in assessing the financial needs of its growing stormwater program and evaluating the feasibility of a fee as the most appropriate funding mechanism. Ms. Fitts served as Project Manager during this successful effort. Ms. Fitts coordinated and oversaw a comprehensive review of all operating and capital costs, specifically identifying and quantifying costs related to existing stormwater program elements, which at that time were primarily categorized as Streets-related costs. Ms. Fitts was also the primary developer of a flexible financial planning and rate model. Subsequent to the feasibility study, Raftelis was engaged by the Borough to implement the stormwater fee based on implementation and data maintenance considerations and recommendations made during the feasibility phase.

Lower Paxton Township (PA)

Raftelis was engaged by Lower Paxton Township to evaluate the feasibility of establishing a stormwater fee as the funding mechanism for the Township's growing stormwater program. Ms. Fitts serves as Project Manager of this project. At the time the feasibility study started, the Township had recently established a Chesapeake Bay Joint Pollutant Reduction Plan (PRP) with neighboring jurisdictions to achieve huge reductions in sediment loading required by TMDLs in receiving waterbodies. Ms. Fitts coordinated Raftelis' work with the Township to evaluate its current program and envision the scope and costs of the future program, with elements both included in and excluded from the PRP. The funding requirements to sustain the program were modeled by Ms. Fitts alongside a preliminary rate base estimate that relied on digitization of a sample of single family residential properties and expert estimation of other impervious surface areas.

Schedule RFC-4

To: Philadelphia Water Department (PWD)	From: Raftelis Financial Consultants
Task Name: 2018 Rate Case Reporting	Project Number: 17 - 20642
Document: TAP Baseline Revenue Loss Update v2	Date: November 27, 2017, updated Jan 3, 2018

The purpose of the memorandum is to provide an update of revenue loss projections associated with the new Tiered Assistance Program (TAP) for fiscal year 2018 (FY 2018) and FY 2019-2021. The TAP program began accepting applications on July 1, 2017 well ahead of the start date required by City Council resolution. The program began by mass mailing 14,426 application packages to customer who had previously been enrolled in Water Revenue Bureau assistance programs. The Department also enacted a robust communications plan to alert customers to the new program benefits and the process through which they could apply. By November 20, 2017, over 25,300 total applications for about 24,100 unique customers had been generated through mass mailings, customer requests, or through a new online portal. To date, only approximately 11,200 applications had been submitted, making it clear that FY 2018 would not realize a full year of lost revenue costs as projected in the prior Rate Case. TAP is still a relatively new program and actual costs may differ materially from projections, however, the Water Department believes it is important to review actual TAP approvals and billings to project updated enrollment in the program and resulting lost revenue.

The first step in updating lost revenue projections was to reassess enrollment in TAP. RFC reviewed the analysis for the prior rate case that utilized US Census data to estimate the households that may meet TAP income criteria. Since the proposed TAP Rate Rider reduces the risk of high enrollment rates and high lost revenue, the Water Department felt more comfortable reducing ultimate enrollment in the program to approximately 26,400 customers. The Department has taken steps to ease customers into TAP by extending the enrollment term for a number of customers in the Water Revenue Assistance Program (WRAP) Water Revenue Bureau Conference Committee (WRBCC) agreements through January of 2018. In addition, WRAP ten-five agreements, typically 60 month agreements, that were established before July 1, 2017 are on-going. Finally, customers may continue to participate in WRBCC if they maintain their enrollment, and for a small percentage of customers WRBCC remains the most affordable customer assistance alternative. As a direct result, we anticipated that TAP maximum enrollment levels will likely be realized over a few years rather than the first or even second year of the program. The table below shows enrollment increasing over the period of the Rate Case to a steady state level by the end of FY 2021.

Annual enrollment projections are translated to lost revenue by applying the actual discounts seen on TAP bills produced in the program to date. So far, TAP bills have seen, on average, a discount of \$56.98. Resulting lost revenue projections by fiscal year are shown in Table 1 below. It should be noted that the average discount of \$56.98 does not currently reflect any increase in customer rates or in income levels for TAP enrollees over the Rate Case. However, it is anticipated that though rates will rise, the Federal Poverty Guideline will as well.

Table 1: Updated TAP Enrollment and Lost Revenue by Fiscal Year

	Enrollment	Percent Increase	Lost Revenue
FY 2018	11,211		\$ 3,900,000
FY 2019	16,924	51%	9,800,000
FY 2020	22,981	36%	13,700,000
FY 2021	26,397	15%	17,000,000

Based on these updated projections, RFC recommends the estimate for FY 2018 lost revenue associated with TAP be revised to \$3.9 million in order to reset fund balances for the Rate Case. We further recommend that the lost revenue baseline for FY 2019-2021 be set to \$9.8 million, \$13.7 million, and \$17.0 million, respectively, to reflect a ramp up in program enrollment. The ability to reset TAP lost revenue projections is predicated on risk reduction from Rate Board adoption of the proposed TAP Rate Rider. Failure to adopt the proposed rider, which allows for equitable cost adjustments, will require adjustments to rate requests.

The Department is also considering delaying the implementation of rates so implementation does not coincide with the City's fiscal year. If this rate year (RY) is set to run from September 1 through August 31, the table above would be recast as shown in Table 2.

Table 2: Updated TAP Enrollment and Lost Revenue by Rate Year

	Enrollment	Percent Increase	Lost Revenue
RY* 2019	17,955		10,400,000
RY* 2020	23,909	33%	14,400,000
RY* 2021	26,397	10%	17,300,000

* the Rate Year (RY) will run September 1 through August 31

FY 12 through FY 16 Average Collection: Non SWO		85.90%	9.08%	1.56%
FY 12 through FY 16 Average Collection: SWO		60.38%	7.69%	4.01%

Schedule RFC-8

To: Philadelphia Water Department (PWD)	From: Raftelis Financial Consultants
Task Name: 2018 Rate Case Reporting	Project Number: 17 - 20642
Document: Typical Residential Customer Consumption	Date: Jan 19, 2018

The purpose of the memorandum is to provide an overview of the methodology used to determine monthly consumption for a typical residential customer account. The Philadelphia Water Department (PWD) has historically provided information to its customers to describe a typical residential water bill referencing 600 cubic feet (CF), or 6 CCF, as the typical amount of usage.

Since Raftelis Financial Consultants, Inc (RFC) began reporting out of the City's water billing system, basis2, in FY2014, we have noticed that typical residential usage appears to be lower than the 6 CCF published. A reduction in consumption used to calculate a typical customer bill is consistent with the trend of declining per capita consumption seen within the PWD retail service area and with water utilities across the country. PWD made a decision that calculations of bill impacts for a typical customer should reflect declining per capita consumption and be based on data from basis2.

PWD has defined 'typical residential usage' as the median usage for which a general service residential customer (GS-R, customer type 4, installation type 08, 09, 10, 11) as billed within a given fiscal year. In addition, customer information is adjusted to exclude any zero bills or those that indicated negative consumption as these consumption levels indicate usage adjustments or inactive accounts, respectively. In order to document consumption for a typical customer, RFC analyzed residential usage by month over the most recently available fiscal years. The reports for FY2015, FY2016, and FY2017 GS-R customers show a decreased typical consumption as compared to the figure previously used by PWD.

Table 1 below shows median consumption values for GS-R in each of the three most recent reporting periods. These values exclude any zero bills or those that indicated negative consumption.

Table 1. Summary Statistics for GS-R Customer Consumption

	FY 2015 (CCF)	FY 2016 (CCF)	FY 2017 (CCF)
JUL	5	5	5
AUG	5	5	5
SEP	5	5	5
OCT	5	5	5
NOV	5	5	5
DEC	5	5	5
JAN	5	5	5
FEB	5	5	4
MAR	5	5	5
APR	5	5	5
MAY	5	5	5
JUN	5	5	5

The analysis shows that GS-R accounts have consistently used 5 Ccf of metered consumption per month at the median over the time period in question. As a result, we recommend that, going forward, calculations of a typical residential bill be adjusted to reflect 5 Ccf of consumption for the purposes of calculating water and sewer volumetric charges.

PWD also requested that RFC determine typical usage for customers receiving the Senior Citizen Discounted (SCD) bill. These customers are outside of the GS-R category. Rather, they have a customer type of D. RFC analyzed these bills separately, utilizing a similar methodology to assess the consumption patterns of the SDC category. Table 2 shows median consumption values for SCD customers for the most recent fiscal year.

Table 2. Summary Statistics for SCD Customer Consumption

FY 2017 (CCF)	
<i>JUL</i>	4
<i>AUG</i>	4
<i>SEP</i>	4
<i>OCT</i>	4
<i>NOV</i>	3
<i>DEC</i>	4
<i>JAN</i>	4
<i>FEB</i>	3
<i>MAR</i>	3
<i>APR</i>	3
<i>MAY</i>	3
<i>JUN</i>	3

The analysis shows that SCD accounts have consistently used 3 or 4 Ccf of metered consumption per month at the median over the most recent fiscal year. As a result, we recommend that, for this rate case, calculations of a typical senior bill reflect 3 Ccf of consumption for the purposes of calculating water and sewer volumetric charges. These results reflect that senior households typically have fewer members than residential households, in general.

Schedule RFC-9

To: Philadelphia Water Department (PWD)	From: Raftelis Financial Consultants
Task Name: 2018 Rate Case Reporting	Project Number: 17 - 20642
Document: Small Commercial Customer Consumption	Date: October 23, 2017

The purpose of the memorandum is to provide an overview of the methodology used to determine attributes for a typical small commercial account. The Water and Sewer Rate Board has been charged with communicating customer impacts on small commercial customers as part of the Rate Case. PWD has not historically identified the attributes of a typical small commercial customer that would allow for a bill calculation under current and proposed rates. Raftelis Financial Consultants (RFC) has queried the City's water billing system, basis2, to determine the meter size and monthly consumption for small commercial customers billed in FY 2017.

The first task is determination of the meter size for a typical small commercial account. Analysis showed there were approximately 29,000 accounts that were designated as commercial with 5/8" meters and approximately 3,000 accounts with 1" meters. Therefore, it seems reasonable to conclude that a 5/8" meter should be used for the small commercial designation.

Next, we must determine the consumption associated with a typical small commercial account. PWD has defined "typical usage" as the median usage for which a commercial customer (customer type '4', 'G', 'P' and installation type '09', '13', '14', '15', '16', '17', '18', '21', '22', '23', '24', '25', '26', '33') as billed within a given fiscal year. In addition, customer information is adjusted to exclude any zero bills or those that indicated negative consumption as these consumption levels indicate usage adjustments or inactive accounts, respectively. In order to document consumption for a typical customer, RFC analyzed usage by month over the most recently available fiscal year. The table below shows median consumption values for the most recent reporting period.

FY 2017 (CCF)	
JUL	7
AUG	6
SEP	7
OCT	7
NOV	6
DEC	6
JAN	7
FEB	6
MAR	6
APR	6
MAY	6
JUN	6
Annual	6

The analysis shows that commercial accounts have consistently used about 6 Ccf of metered consumption per month at the median over the time period in question. As a result, we recommend that a typical small commercial bill be calculated based on a 5/8" meter size and 6 Ccf of consumption.
