Vital Statistics Report 2005

INCLUDED IN THIS REPORT:

- New population estimates
- Trend data by age, sex, race & ethnicity
- Life expectancy for Philadelphians
- · Leading causes of death
- · Birth parity and plurality
- · Leading causes of infant mortality
- Youth homicide data
- Additional data about resident births and deaths in Philadelphia

VITAL STATISTICS REPORT

PHILADELPHIA: 2005

CITY OF PHILADELPHIA

John F. Street, Mayor

Loree D. Jones, Managing Director

Julia Danzy, Director of Social Services

PHILADELPHIA DEPARTMENT OF PUBLIC HEALTH

John F. Domzalski, JD, MPH, Health Commissioner

Joseph C. Cronauer, Executive Deputy Commissioner

Suet T. Lim, PhD, Director of Health Data, Statistics and Research

REPORT PREPARED BY:

Suet T. Lim, Ph.D., Director of Health Data, Statistics & Research Rebecca Drake, Research Coordinator

ASSISTED BY:

Daryl Northern, Executive Assistant

INTRODUCTION

This Report is issued annually by Philadelphia Department of Public Health. In accordance to Philadelphia Home Rule Charter, the Department of Public Health shall be the agency of the City for compiling, analyzing, maintaining, and reporting statistics and data concerning births, still-births, and deaths (Chapter 3, 5-300, d). The annual vital statistics report fulfills this function, and reports on the vital events of births, deaths and fetal deaths (i.e. still-births) occurring to Philadelphia residents. This Report represents vital events that occurred in 2005.

The 2005 Report has been revised from the last report issued by Philadelphia Department of Public Health, the 2003-2004 Vital Statistics Report. These revisions incorporate changes made in data collection tools, including revised live birth certificate effective 01/01/2003 as well as categorization rules issued by National Center for Health Statistics (NCHS) and codes of International Classification of Diseases, Tenth Revision (ICD-10). Additional details on these revisions are provided in the natality and mortality sections. If you have used previous reports, you will find that the table numbering have been changed and may wish to use the bridging tables at the end of this Report to locate statistics previously reported in tables newly numbered. In both the natality and mortality sections, some statistics are no longer being reported. The omissions are noted in the narrative of these sections.

Beginning with 2005, disease morbidity will no longer be included in the annual vital statistics report. The Division of Disease Control and Emergency Preparedness (DDC) conducts surveillance for reportable diseases and conditions and issues an annual report. Electronic versions of this report (in pdf format) can be found at http://www.phila.gov/health/units/ddc/html/DDC_Annual_Reports.html. Data on cases of HIV/AIDS and lead poisoning are reported separately by the units that handle those conditions. The AIDS Surveillance Quarterly Report is available from http://www.phila.gov/health/units/aaco/HIV_AIDS.html. Inquiries about lead poisoning statistics should be addressed to the Childhood Lead Poisoning Prevention Program, at 215-685-2788.

Beginning with this Report, the annual vital statistics report will provide supplemental statistics to highlight special or current public health issues. These statistics are not part of the standard reporting and will be presented periodically. Depending on the topic matter, these supplemental tables will appear in the appropriate sections of the report.

This report presents vital events to Philadelphia residents, regardless of event location. Residency is determined by address fields in the live birth, death and fetal death certificates. For the live birth and fetal death records, mother's documented residence determines residency. Mother's mailing address, a separate address field from residence address, is not utilized. For the death records, residency is determined by the documented mailing address, the only address field on the death certificate. Readers should note that a separate report on vital events by geographic unit will be issued at a later date.

The birth, death and fetal death data is obtained from computer files provided by the Pennsylvania Department of Health. They require that the following statement be included: "These data were supplied by the Bureau of Health Statistics and Research, Pennsylvania Department of Health, Harrisburg, Pennsylvania. The Pennsylvania Department of Health specifically disclaims responsibility for any analyses, interpretations or conclusions".

Population Section

This section contains the population count of the City of Philadelphia as enumerated by the federal Census Bureau in 2000. It also contains two sets of 2005 estimates produced by the Pennsylvania State Data Center (PASDC) as well estimates developed by the Census Bureau Population Estimates Program. These estimates were developed through the Federal State Cooperative Program for Population Estimates.

The 2005 population of Philadelphia is estimated at 1,463,281. This represents a 3.6% decrease from the 2000 enumerated population. Race-specific estimates are available for White, Black and Asian for this data year, as well as estimates of the Hispanic population. Combined race-ethnic specific estimates are not provided through PASDC; hence the race-specific estimates from PASDC in Table P2 include Hispanics and non-Hispanics. The estimates of Hispanics in Table P3 include Hispanics of any race. The race and Hispanic ethnicity categories are not mutually exclusive for this presentation of population estimates.

The Population Estimates Program estimates provide for combined race-ethnic specific categories. This enables the calculation of rates for the categories of White, non-Hispanic; Black, non-Hispanic; and Asian, non-Hispanic. Due to differences in the use of single race and multiple races reporting, the Census Bureau's estimates differ from PASDC, notably in the estimate of Hispanic females. This report presents the single Race alone in combination with Hispanic ethnicity for the race-ethnicity estimates.

This Report utilizes the 2005 population estimates for calculating rates, unless otherwise noted. Notes for the rate tables indicate which of the two sets of population estimates are being utilized. Infant mortality statistics utilizes live birth, and when appropriate, fetal deaths, as the denominator in rates calculation.

Table P1 – Population, 2000 & 2005

Natality Section

There were 22,027 live births in 2005 to women who lived in Philadelphia, inclusive of events within and outside the City limits. All birth data are derived from the live birth certificate record, which is electronically reported to Pennsylvania Department of Public Health.

There are 396 more births reported for Philadelphia residents in 2005 than 2004. The crude birth rate increased to 15.1 per 1,000 estimated residents in 2005.

Race

As noted in the previous annual report, data items for race of mother are collected differently beginning with 2003 births. In keeping with federal guidelines issued by the National Center for Health Statistics (NCHS), Philadelphia Department of Public Health tabulates birth data by race of mother. Pennsylvania live birth certificate collects both multiple races as well as a self-designated single race category for the mother. In keeping with Pennsylvania Department of Health's reporting procedure, the self-designated single race data for mother's race was utilized.

Table N1 shows that in 2005, there were 6,033 White, 10,880 Black and 1,371 Asian births. Births to Hispanic mothers increased from 3,384 in 2004 to 3,496 in 2005. Hispanic ethnicity is a separate question from race of mother, and therefore a person of Hispanic origin can be of any race.

For combined race and ethnicity, the two data items were combined to determine the following categories: non-Hispanic White, non-Hispanic Black, non-Hispanic Asian, and Hispanic (of any race). These are mutually exclusive categories. Table N2 shows the distribution of birth by the combined race and ethnicity of mothers. There were 5,577 non-Hispanic White, 10,380 non-Hispanic Black, and 1,338 non-Hispanic Asian births respectively. A small number of births were reported for non-Hispanic Other race as well as to women with Unknown race.

Age of Mother

Trends in age distribution of mothers by race and ethnicity are presented in Table N3. This table enables comparison to presentation on age of mother by race and by ethnicity in previous reports.

Table N4 shows the age distribution of mothers by the combined race and ethnicity categories. Amongst non-Hispanic White women, the largest percentage of births was to 25 to 29 year old women. Similarly non-Hispanic Asian women had the highest percentage of births in this age group. The age distribution pattern for non-Hispanic Black and Hispanic (of any race) women shows the largest percentages of births were to women in the 20 to 24 year old age category.

Low Birth Weight

Newborns weighing 2,500 grams or less (i.e. less than or equal to 5 pounds 8 ounces) at time of birth are considered to be of low birth weight. In 2005, 11.3 percent of all live births were in this weight category. This Report also presents statistics on very low birth weight (i.e. weighing 1,500 grams or less) infants. 2.5 percent of all live births in 2005 are categorized as very low birth weight infants. Very low birth weight is a subset of the low birth weight category.

Tables N5 and N7 show the trends in low birth weight and very low birth weight by race and by ethnicity respectively. To examine the distribution of these two health indicators more closely, Tables N6b and

N7b show the age, race and ethnicity distribution of mothers with low and very low birth weight. For each specified age, race and ethnicity category, the statistics refer to the percentage of mothers within the specified category that had a low or very low birth weight infant.

Gestational Age

This is a natality measurement newly introduced in this Report. Gestational age of births provides information about maternal health and correlates with birth weight. Gestational age is measured by the number of completed weeks of pregnancy. Pre-term births are defined as pregnancies with less than 37 completed weeks of gestation. Term pregnancies are between 37 and 41 weeks of completed gestation. Pregnancies with 42 or more weeks of completed gestation are post-term births.

Table N9 shows the distribution of gestational age by mother's age, race and Hispanic ethnicity. For each specified age, race and ethnicity category, the percentage refers to the mothers within the specified category with pre-term, term or post-term births. Births with unknown gestational age are not presented in this table.

Overall, 83.9% of live births to Philadelphia women were term births. Pre-term pregnancies account for 12.1% of all live births. Percent of pre-term births vary between the race-ethnicity groups. Amongst non-Hispanic White women, pre-term births account for 9.7 % of all births. The percent of pre-term births for non-Hispanic Black women is 14.2%, while amongst non-Hispanic Asian women, it is 6.1%. Hispanic women reported 11.4% pre-term births in 2005.

Birth Parity

This birth measurement was reported in prior vital statistics reports as the number of previous live births (reported in Table 47 in prior reports). This measurement was condensed for this Report to indicate the parity of the reported live birth up to 5th or higher order births. For comparison to the presentation of statistics by race in prior vital statistics reports, Table 10a shows birth parity by race and age of mother. 1st parity births in this Report correspond with 0 previous live births in prior reports. Table N10b shows the distribution of birth parity by age of mother, race and Hispanic ethnicity.

In 2005, there were 8,586 first time mothers (1st parity births) of the 22,027 live births reported. The 15 to 19 year old women had the largest number of 1st parity births with 2,544 births. Amongst women aged 40 and above, there were 116 first time mothers. There were 1,426 births that represented 5th or higher order births to Philadelphia women in 2005.

Birth Plurality

Table N11 shows birth plurality (i.e. singleton, twins, triplets, etc.) by age of mother, race and Hispanic ethnicity. This measurement is taken from the reported plurality variable on the live birth certificate. This Report presents only singleton, twin and triplet births. Quadruplets and higher order births are included in the total births reported but not presented in this table.

Characteristics of Labor and Delivery

Complications of labor and delivery data were collected differently beginning in 2003 with the implementation of a revised live birth certificate in Pennsylvania. The revised certificate distributed information about complications across three separate medical and health categories. The 2003-2004 Annual Vital Statistics Report did not report on medical and health information related to complications of labor and delivery. With the

revisions implemented for this Report, characteristics of labor and delivery, which include some of the complications previously reported in reports prior to 2003-2004, will be included.

Table N12 shows characteristics of labor and delivery by age of mother, race and Hispanic ethnicity. The first column on the left reports on the number of births with at least one of the medical items listed in the subsequent columns on the right. These items include: induction of labor; augmentation of labor; non-vertex presentation; steroids (glucocorticoids) for fetal lung maturation received by the mother prior to delivery; antibiotics received by mother during labor; clinical chorioamnionitis diagnosed during labor or maternal temperature => 38°C (100.4°F); moderate/heavy meconium staining of the amniotic fluid; fetal intolerance of labor such that one or more of the following actions was taken: in-utero resuscitation measures, further fetal assessment, or operative delivery; epidural or spinal anesthesia during labor.

A total of 18,086 births reported having at least one of the medical items listed for characteristics of labor and delivery. Of the listed procedures, 15,483 births utilized epidural or spinal anesthesia during labor.

Maternal Morbidity

Many of the complications of labor and delivery data items were retained under a different data category, "Maternal Morbidity" on the revised live birth certificate. The items in this category include: maternal transfusion; third or fourth degree perineal laceration; ruptured uterus; unplanned hysterectomy; admission to intensive care unit; unplanned operating room procedure following delivery.

Table N13 shows complications of labor and delivery by age of mother, race and Hispanic ethnicity. The first column on the left reports on the number of births with at least one of the complications listed in the subsequent columns on the right. A total of 283 births reported having at least one of the complications listed.

Route and Method of Delivery

The revised live birth certificate has four routes and methods of delivery listed. Only one final route and method of delivery is reported for each live birth recorded. Thus, the four categories are mutually exclusive. Table N14 shows the number and percentage of route and method of delivery by age of mother, race and Hispanic ethnicity. Unknown route and delivery are not presented in this table; therefore, the percentages do not necessarily add up to 100% across the four categories listed.

More than one quarter (27.7%) of all Philadelphia births were delivered by cesarean section. Comparisons to prior years are possible for this medical procedure as previous reports had included statistics on cesarean births. However, information on other routes and methods of delivery were not available in prior this Report.

Abnormal Conditions of Newborn

Seven items of abnormal conditions of newborn are reported on the live birth certificate. The items in this category include: assisted ventilation required immediately following delivery; assisted ventilation required for more than six hours; neonatal intensive care unit (NICU) admission; newborn given surfactant replacement therapy; antibiotics received by the newborn for suspected neonatal sepsis; seizure or serious neurologic dysfunction; significant birth injury (skeletal fracture(s), peripheral nerve injury, and/or soft tissue/solid organ hemorrhage which requires intervention).

Table N15 presents the abnormal conditions of newborn by age of mother, race and Hispanic ethnicity. The first column on the left reports on the number of births with at least one of the conditions listed in the

subsequent columns on the right. 1,965 births reported having at least one of the conditions listed. There were 1,768 NICU admissions reported for 2005 using data from the live birth certificate records.

Congenital Anomalies of Newborn

The live birth certificate list thirteen congenital anomalies. The items in this category include: anencephaly; meningomyelocele/Spina bifida; cyanotic congenital heart disease; omphalocele; gastroschisis; limb reduction defect (excluding congenital amputation and dwarfing syndromes); cleft lip with or without cleft palate; cleft palate alone; Down Syndrome – karotype confirmed; Down Syndrome – karotype pending; suspected chromosomal disorder – karotype pending; hypospadias.

Table N16 presents the congenital anomalies of newborn by age of mother, race and Hispanic ethnicity. The first column on the left reports on the number of births with at least one of the congenital anomalies listed in the subsequent columns on the right. The 2005 birth records reported 66 births of having at least one of the congenital anomalies listed.

Other Natality Statistics

The natality section of this Report has been revised to include new health statistics, not previously reported. As part of these revisions, some statistics are no longer being reported in this annual report. Among them are mother's marital status, smoking behavior, and prenatal care utilization. The 2003-2004 report noted large number of records with missing information for one or more data items that are required for the calculation of these statistics. Due in part to data quality issues, these statistics will not be presented in this Report.

Health Data, Statistics and Research Unit will revisit the data quality issues with the Division of Maternal, Child and Family Health (MCFH). It is anticipated that some of these natality statistics will be reported by MCFH in their birth report to be issued after this Report.

Mortality Section

There were 15,459 deaths recorded for residents of Philadelphia in 2005. Resident deaths include all events to Philadelphia residents regardless if the place of death is within or outside the City limits. All mortality data are derived from the death certificate, which are registered with Pennsylvania Department of Health.

Key Mortality Statistics

Table M1 shows the number of resident deaths, infant, neonatal, post-neonatal and perinatal deaths from 1995 to 2005. The 2005 crude death rate for Philadelphia residents was calculated at 10.6 deaths per 1,000 resident population.

Infant mortality rate for 2005 was 11.3 infant deaths per 1,000 live births. This rate represents an increase from 2004.

Perinatal mortality numbered 230 in 2005, with a rate of 10.4 deaths per 1,000 live births plus late fetal deaths (i.e. stillborns). This Report reintroduces this key mortality statistics, which have not been reported in the preceding 10 years.

Mortality Differences by Race and Ethnicity

Key mortality statistics were calculated for three race groups and one ethnic minority group. Table M2 shows the number resident deaths, infant, neonatal, post-neonatal and perinatal deaths by race and by ethnicity from 1995 to 2005. The presentation of mortality statistics are by race and by ethnicity individually in this table. Hence, the numbers of White, Black or Asian deaths include individuals for whom Hispanic ethnicity was reported. The Hispanic ethnicity category includes Hispanics of any race, including White, Black or Asian. The race and ethnicity categories in this table are not mutually exclusive. This table enables the comparison to mortality statistics by race and by ethnicity reported for prior years. The crude death rates were calculated utilizing population estimates from PASDC as the denominators for the specified race or ethnicity population group.

Table M2a shows the number of resident deaths, infant, neonatal, post-neonatal and perinatal deaths by race and ethnicity. Combining race and ethnicity reported this table presents mortality statistics for the mutually exclusive categories of non-Hispanic Whites, non-Hispanic Blacks, non-Hispanic Asians, and Hispanics. The crude death rates utilized the specified combinations of race-ethnicity population groups respectively in the numerators as well as in the denominators. While the death certificate records serve as the data source for the numerators in both Tables M2 and M2a, the data source for the denominators were different. Population estimates developed by the Census Bureau Population Estimates Program included single and multiple race categories in combination with Hispanic ethnicity. These are the estimates used in rate calculation for Table M2a. In keeping with the single race data recorded on the death certificate, only the single Race alone variables were used. To calculate the crude death rate for non-Hispanic Whites, this table utilized the non-Hispanic White Alone estimates.

This is the first instance that the annual vital statistics report presents combined race-ethnicity specific mortality statistics. Thus, this is a first time use of the combined race-ethnicity specific population estimates in calculation of rates. Readers are advised that the resultant death rates calculated for race or ethnicity alone (in Table M2) are different from those calculated for combined race-ethnicity categories (in Table M2a).

In monitoring key mortality statistics by race, Table M2 notes that there are still disparities between White, Black and Asian infant mortality rates. The difference in rates between White and Black is smaller in

2005; however there is little change in differences between White and Asian or Black and Asian rates. The White infant mortality rate increased to 12.1 per 1,000 in 2005; the Black infant mortality rate for this period had decreased to 14.9 in 2005 and Asian infant mortality rate showed little change, with a reported rate of 4.4 per 1,000. During this period, infant mortality for the Hispanic population has increased to 10.3 deaths per 1,000 live births.

Comparing race-ethnicity specific rates in Table M2a, there are notable differences between the different race-ethnicity groups. Non-Hispanic Asians reported the lowest infant mortality rate of 4.5 infant deaths per 1,000 live births, followed by non-Hispanic White with a rate 7.4, Hispanic at 10.3 and non-Hispanic Black at 15.3 per 1,000.

Causes of Death

The underlying cause of death field from the death certificate is the data item used to tabulate cause of death statistics. The underlying cause is either the disease or injury which initiated the train of events leading directly to death or the circumstances. Pennsylvania Department of Health codes the cause of death on the death certificate and classifies death by causes according to the International Classification of Diseases, Tenth Revision (ICD-10) of the World Health Organization.

Leading Causes

One of the key revisions for this Report is the tabulation of cause of death statistics. Beginning with this Report, the Health Department followed the guidelines in Instruction Manual Part 9 issued by the National Center for Health Statistics (NCHS). Instruction Manual Part 9 presents the lists of causes of death for tabulation and dissemination of mortality data by NCHS using ICD-10 codes. The tabulation lists have been developed to maintain continuity with the lists from the Ninth Revision of the International Classification of Diseases (ICD-9); to facilitate trend analysis; and to separately identify cause of death that are of public health and medical importance. The use of Instruction Manual Part 9 will enable Philadelphia Department of Public Health to generate mortality statistics comparable to federal statistics as well as keep up-to-date on causes of mortality of public health importance.

Of the eight mortality tabulation lists in the Manual, this Report utilized two: List of 113 Selected Causes of Death (Table B in Instruction Manual Part 9) and List of 130 Selected Causes of Infant Death (Table C). Table B is used for the general analysis of mortality and for ranking leading causes of death. The rankable causes of death from the list in Table B were utilized to tabulate, rank and determine leading causes of death statistics for Tables M3, M4, M5a, M5b, M5c, and M5d. Table C is used for the analysis of infant mortality and for ranking leading causes of infant death. The rankable causes of death from the list in Table C were utilized to tabulate, rank and determine the leading causes of death for Table M8. Table C list was also utilized for the infant death statistics in Tables M3, M4, M5a, M5b, M5c, and M5d.

Table M3 presents the top five leading causes of death to Philadelphia residents in 2005 by specified age groups. These age groups approximates stage of life age groupings including: infants (under 1 year), young children (1 to 4 years), children (5 to 14 years), teens and young adults (15 to 24 years), adults (25 to 44 years), middle-aged adults (45 to 65), older adults (65 plus years). In keeping with the guidelines for ranking causes of death, causes that tie for one of the ranked positions are listed. Thus amongst infant deaths in 2005, there are five causes that ranked as the fifth leading cause of death, including: bacterial sepsis of newborn; necrotizing enterocolitis of newborn; neonatal hemorrhage; newborn affected by complications of placenta, cord and membranes; septicemia. There were 6 infant deaths each for each of the causes listed. For young children ages 1 to 4 years, accidents (unintentional injuries) were the leading cause of death. Assaults (homicide) were the number one cause of death among children 5 to 14 years old, teens and young adults 15 to 24 years old. Among

adults aged 25 to 44, accidents were the leading cause while malignant neoplasm and diseases of the heart were the leading causes for middle-aged adults 45 to 65 and older adults 65 plus.

Leading causes of death statistics by age and gender are presented in Table M4. The tabulation and ranking procedures were repeated for each of the following race-ethnicity group: non-Hispanic White, non-Hispanic Black, non-Hispanic Asian and Hispanics (of any race). Tables M5a, M5b, M5c, M5d shows the leading causes of death by race-ethnicity, age and gender.

Selected Causes

Selected causes of death by age and gender are presented in Tables M6, M6a, and M6b. Tabulations of the selected causes tables are based on the list in Table B of Instruction Manual Part 9. These tables allow for examination of specific causes not explicated in the leading causes of death tables. The underlying cause of death is aggregated according to the grouping of causes in Table B list. These statistics are not ranked; hence, the selected causes of death are presented in the chapter order in which they appear in ICD-10. Readers interested in specific causes of death should utilize the selected causes of death tables. ICD-10 codes are included in these tables.

This tabulation procedure was repeated for each of the following race-ethnicity group: non-Hispanic White, non-Hispanic Black, non-Hispanic Asian and Hispanics (of any race). Tables M7, M7b, M7c, and M7d present selected causes of death statistics by race-ethnicity, age and gender.

Causes of Infant, Neonatal and Post-Neonatal Deaths

Leading causes of infant, neonatal, and post-neonatal deaths are presented in Table M8. The tabulation and ranking procedures were repeated for each of the following race-ethnicity group: non-Hispanic White, non-Hispanic Black, non-Hispanic Asian and Hispanics (of any race). These statistics are presented in Table 8 as well. Tabulation of infant, neonatal, and post-neonatal deaths utilized the rankable list in Table C.

Selected causes of infant, neonatal, and post-neonatal deaths are presented in Tables M9, M9a, and M9b. Tabulations of the selected causes tables are based on the list in Table C of Instruction Manual Part 9. These tables allow for examination of specific causes. These statistics are not ranked; hence, the selected causes of death are presented in the order in which they appear in ICD-10. Readers interested in specific causes of death should utilize the selected causes of death tables.

Manner of Death

Manner (a.k.a. mode) of death statistics are presented in Table M10. Natural deaths account for 88.39% of all Philadelphia resident deaths. This is followed by accident (4.77%), homicide (2.36%), and suicide (1.03%). 2.49% of deaths had no manner recorded (i.e. not provided), 0.59 % were undetermined and 0.36% are still pending at the time of this Report.

Youth Homicides

Homicide deaths have been on the increase in Philadelphia. Youth violence is of particular concern. To supplement the causes of death statistics tables, this Report presents two supplemental tables on youth homicides. Table S1a presents the demographic distribution of youth homicide (ages 10 to 24) deaths. Table S1b presents the specific cause of youth homicide deaths.

Life Expectancy

This is a mortality measurement newly introduced in this Report. Life expectancy summarizes the effect of mortality rates prevailing at a specific time on individuals born or living at that time. Table M presents life expectancy at different ages for Philadelphia residents by gender. Life expectancy at birth for Philadelphia males based on 2005 mortality rates is 70.2. The statistics for Philadelphia females is 78.48.

DEFINITIONS OF TERMS

Natality:

PRETERM - Less than 37 completed weeks of gestation.

TERM - 37 to 41 weeks of completed gestation.

POST-TERM - 42 weeks or more of gestation

BIRTHWEIGHT - The first weight of the newborn obtained after birth. This weight should be measured preferably within the first hour of delivery before significant postnatal weight loss has occurred.

LOW BIRTHWEIGHT - A birth weight under 2500 grams or 5 pounds, 9 ounces.

VERY LOW BIRTHWEIGHT - A birth weight under 1500 grams or 3 pounds, 5 ounces.

LIVE BIRTH - According to Pennsylvania law, is the expulsion or extraction from its mother of a product of conception, irrespective of the period of gestation, which shows any evidence of life at any moment after such expulsion or extraction.

Mortality:

FETAL DEATH - As defined by Pennsylvania law: "the expulsion or extraction from its mother of a product of conception after 16 weeks gestation, which shows no evidence of life after such expulsion or extraction".

INFANT DEATH - Death of an infant under 1 year of age.

NEONATAL DEATH - An infant death occurring within the first 27 days of life.

POST-NEONATAL DEATH - An infant death occurring at 28 days to 364 days of age.

PERINATAL MORTALITY RATE- Is the sum of late fetal deaths (28 weeks or more) plus infant deaths within 7 days of birth divided by the sum of live births plus late fetal deaths, per 1,000 live births plus late fetal deaths. (Perinatal relates to the period surrounding the birth event. Rates and ratios are based on events reported in a calendar year.)

BRIDGING TABLES

Bridging tables have been prepared to assist readers locate statistics that were previously reported, in tables newly numbered in the revised vital statistics report. Please note that some statistics are no longer being reported. These are noted in the narrative of both the natality and mortality sections. If there is no comparable statistics, the old table number will not appear in the bridging tables. Bridging tables are provided for the population, natality and mortality sections.

Population Section Tables

Old table number in previous vital statistics report (prior to 2005)	Current table number in revised vital statistics report (2005 to current)	Notes regarding difference in table contents
1	P1, P2	Estimates for "All Races" are presented in Table P1; estimates by race are presented in Table P2; "Other" race statistics are discontinued

Natality Section Tables

Old table number in previous vital statistics	Current table number in revised vital statistics	Notes regarding difference in table contents
report (prior to 2005) 25, 26	report (2005 to current) N1	Statistics from Tables 25 and 26 are combined into Table N1
27, 28, 30, 31	N4	Statistics from Tables 27, 28, 30 and 31 are combined into Table N4; trend statistics from Tables 27 and 28 are standardized to 10 years preceding report year in Table N4
34	N6a	"Unmarried Mothers" and "Prenatal Care" statistics are discontinued
35, 36	N6b	Tables 35 and 36 statistics are combined into Table N6b; "Unmarried Mothers" and "Prenatal Care" statistics are discontinued
46	N10a	Highest numeric category for "Birth Parity" statistics standardized to 5 or higher
47	N10b	Highest numeric category for "Birth Parity" statistics standardized to 5 or higher
48	N11	"Birth Plurality" statistics report on counts replacing percentages; highest numeric category for "Birth Plurality" statistics standardized to triplets
49, 50	N12	Race and Hispanic Ethnicity statistics on "Complications of Labor and/or Delivery" from Tables 49 and 50 are combined into Table N12;

		"Complications of Labor and/or Delivery" category expanded to include all Labor and Delivery fields collected on live birth certificate;
49, 50	N13	Race and Hispanic Ethnicity statistics on "Medical Risk Factors of Mother" from Tables 49 and 50 are combined into Table N13; "Medical Risk Factors of Mother" category expanded to include all Maternal Morbidity fields collected on live birth certificate
49, 50	N14	Race and Hispanic Ethnicity statistics on "C-Section Deliveries" from Tables 49 and 50 are combined into Table N14; "C-Section Deliveries" category expanded to include all Route and Method of Delivery fields collected on live birth certificate
49, 50	N15	Race and Hispanic Ethnicity statistics on "Newborn Abnormal Conditions" from Tables 49 and 50 are combined into Table N15; "Newborn Abnormal Conditions" category expanded to include all Abnormal Conditions of Newborn fields collected on live birth certificate
49, 50	N16	Race and Hispanic Ethnicity statistics on "Congenital Anomalies" from Tables 49 and 50 are combined into Table N16; "Congenital Anomalies" category expanded to include all Congenital Anomalies of Newborn fields collected on live birth certificate
51	N7	Birth Weight categories are collapsed into a single Very Low Birth Weight category; trend statistics on VLBW are presented for 10 years preceding report year

Mortality Section Tables

		Section Tubics
Old table number in	Current table number in	Notes regarding difference in table contents
previous vital statistics	revised vital statistics	
report (prior to 2005)	report (2005 to current)	
4	M1	Trend statistics from Table 4 are standardized to 10 years preceding report year in Table M1; "Maternal Deaths" statistics are reported in Tables M6b, M7b, M7d, M7f, M7h according to Race and Ethnicity of decedent; Table M1 includes "Perinatal Mortality" statistics
5, 7, 8	M2	Trend statistics from Tables 5, 7, and 8 are combined and standardized to 10 years preceding report year in Table M2; "Maternal Deaths" statistics are reported in Tables M6b, M7b, M7d, M7f, M7h according to Race

		and Ethnicity of decent; Table M2 now includes "Perinatal Mortality" statistics
9, 10	M4	"Causes of Resident Deaths" statistics are tabulated and ranked according to the guidelines in Instruction Manual Part 9 issued by the National Center for Health Statistics; the "Cause of Death" categories in Tables 9 and 10 are not 100% compatible with the "Leading Causes of Death" categories in Table M4
11	M5	"Causes of Resident Deaths" statistics are tabulated and ranked according to the guidelines in Instruction Manual Part 9 issued by the National Center for Health Statistics; the "Cause of Death" categories in Table 11 are not 100% compatible with the "Leading Causes of Death" categories in Table M5
12, 13, 14, 15	M5a – M5b	"Causes of Resident Deaths" statistics are tabulated and ranked according to the guidelines in Instruction Manual Part 9 issued by the National Center for Health Statistics; the "Cause of Death" categories in Tables 12, 13, 14, and 15 are not 100% compatible with the "Leading Causes of Death" categories in Tables M5a – M5d
16	M9a	"Selected Causes of Infant Deaths" statistics are tabulated according to the guidelines in Instruction Manual Part 9 issued by the National Center for Health Statistics; "Cause of Death" categories in Table 16 are not 100% compatible with the "Selected Causes of Infant Death" categories in Table M9a
17	M9b	"Selected Causes of Neonatal Deaths" statistics are tabulated according to the guidelines in Instruction Manual Part 9 issued by the National Center for Health Statistics; "Cause of Death" categories in Table 17 are not 100% compatible with the "Selected Causes of Infant Death" categories in Table M9b
18	M9c	"Selected Causes of Post-neonatal Deaths" statistics are tabulated according to the guidelines in Instruction Manual Part 9 issued by the National Center for Health Statistics; "Cause of Death" categories in Table 18 are not 100% compatible with the "Selected Causes of Infant Death" categories in Table M9c
19, 20, 21, 22, 23	M7a – M7h	"Selected Causes of Resident Deaths" statistics are tabulated according to the guidelines in Instruction Manual Part 9 issued by the National Center for Health Statistics; the "Cause of Death" categories in Tables 19, 20, 21, 22, 23 are not 100% compatible with the

		"Selected Causes of Death" categories in Tables M7a – M7h
24A, 24B	M11s	"Demographic" statistics from Tables 24A and 24B are presented in Table M11s
24A, 24B	M12s	"Specific Causes of Death" statistics from Tables 24A and 24B are presented in Table 12s
