The historic resource satisfies the following criteria for designation (check all that apply):

(a) Has significant character, interest or value as part of the development, heritage or cultural characteristics of the City, Commonwealth or Nation or is associated with the life of a person significant in the past; or,

(b) Is associated with an event of importance to the history of the City, Commonwealth or Nation;

(c) Reflects the environment in an era characterized by a distinctive architectural style; or,

(d) Embodies distinguishing characteristics of an architectural style or engineering specimen; or,

(e) Is the work of a designer, architect, landscape architect or designer, or engineer whose work has significantly influenced the historical, architectural, economic, social, or cultural development of the City, Commonwealth or Nation; or,

(f) Contains elements of design, detail, materials or craftsmanship which represent a significant innovation; or,

(g) Is part of or related to a square, park or other distinctive area which should be preserved according to an historic, cultural or architectural motif; or,

(h) Owing to its unique location or singular physical characteristic, represents an established and familiar visual feature of the neighborhood, community or City; or,

(i) Has yielded, or may be likely to yield, information important in pre-history or history; or

(j) Exemplifies the cultural, political, economic, social or historical heritage of the community.

6. PHYSICAL DESCRIPTION
Situated at 1106-1114 Spring Garden Street, the former Woodward-Wanger Co. is a two story Colonial Revival industrial building that was constructed in 1929. Of steel frame construction, the building is clad in red brick with a flat roof. Adhering to a primary tenant of the Colonial Revival style, the red brick façade is symmetrical in the design and treatment of primary elevation, which spans seven bays along the south side of Spring Garden Street. The entire façade features a base course of soldier brick, which is mimicked in a course that spans the façade beneath the windows. The entire façade features redbrick that is laid in a Flemish bond.

First Floor. The central bay projects slightly at the first floor, placing a visual emphasis on the primary, pedestrian entrance, and showcasing the Georgian-inspired door surround and infill. The aperture features double paneled wooden doors with an elliptical fanlight overhead. The opening is delineated by an architrave of tiered red soldier brick. Lightly-colored, smooth-faced stone or concrete key blocks define the base of the fanlight opening and a like keystones is positioned at the center of the arch. The interior is accessed by a large granite step that doubles as a threshold. Flanking the doorway are vertical panels within the red brick façade formed by decorative brickwork further defined by lightly-colored, smooth-faced stone or concrete key blocks. A decorative belt courses spans the projecting bay immediately above the doorway. The roofline of the single-story projection is defined by an elegant cornice of a lightly-colored, smooth-faced stone or concrete.
Looking southeast, the central bay of the subject property. Note the brickwork, the stone or concrete details, and the original windows. Source: Michael Bixler.

Flanking the central bay are two bays designed, one at the east and one at the west, for loading and unloading vehicles. Like most loading bays, the openings are slightly elevated from the sidewalk. The loading section of each aperture features replacement infill windows, which are capped by lintels that also support three-part transoms overhead. Elements of the original transom windows survive with a wide central window of ten lights flanked by smaller windows of six lights. This design and configuration is repeated in the next set of apertures that flank the three central apertures. Both are three-part mullion windows with a wide ten-over-fifteen sash at center and narrower six-over-nine sash on each side. Slightly narrower, an additional set of apertures flank the five previously described. These openings also contain three-part mullion windows, being slight reductions of those previously described with three six-over-nine sash windows. A course of soldier brick spans the façade serving as lintels above the first floor openings, excluding the central bay.

Second Floor. The first and second floors are delineated by horizontal spandrels that are formed by decorative brickwork and key blocks between the windows in all of the bays aside from the center. The fenestration of the second floor mimics that of the first with what appears to be metal multi-light industrial sash windows. All of the windows and loading bay openings feature lightly-colored, smooth-faced stone or concrete sills.

Above the second floor windows is a simple projecting cornice above which is a low, but notable brick parapet with rising sections that delineate the piers between the apertures.

7. STATEMENT OF SIGNIFICANCE

The former Woodward-Wanger Co. at 1106-1114 Spring Garden Street is a significant historic resource that merits designation by the Philadelphia Historical Commission and inclusion on the Philadelphia Register of Historic Places. Located in the Callowhill neighborhood, the subject building satisfies the following Criteria for Designation, as enumerated in Section 14-1004 of the Philadelphia Code:

(c) Reflects the environment in an era characterized by a distinctive architectural style; and

(d) Embodies distinguishing characteristics of an architectural style or engineering specimen;

The period of significance for the subject designation is 1929 to 1930.

Historic Overview. Established earlier, the Woodward-Wanger Co. was granted a charter by Commonwealth of Pennsylvania on August 18, 1911 with a capital of $50,000. The company was a successful “plumbing supply house” of Philadelphia, later expanding to include other products. Starting at 1106 Vine Street, the Woodward-Wanger Co. moved to two row houses at 1106-1108 Spring Garden Street, and later added 1110, 1112, and 1114 to their operation. In May 1929 there was a major fire in the building that ultimately led to demolition. After the fire, the Woodward-Wanger Co. commissioned F.B. Davis & Son, Inc. to construct a “two-story warehouse and office building” at an estimated cost of $40,000. The permits were granted for construction in September 1929. Construction was completed in 1930. The company operated in this building until 1949 when they moved to the intersection of Ridge Avenue and Crawford Street. The subject building was sold to the Lawsonia Manufacturing Company in late 1949. For more than fifty years the company used the building for the manufacture of “high-end furniture.”

---

CRITERION D
The former Woodward-Wanger Co. at 1106-1114 Spring Garden Street is a distinctive example of the Colonial Revival style as applied to commercial and industrial buildings in Philadelphia in the first half of the twentieth century.

Background. According to the Pennsylvania Architectural Field Guide by the Historical and Museum Commission, the Colonial Revival Style 1880-1960 is “...one of the most frequently produced and enduring popular styles in America...” The style enjoyed huge popularity as a result of the Philadelphia Centennial of 1876, and further popularized by the Columbian Exposition of 1893 in Chicago. Like other revivalist movements, the Colonial Revival movement didn’t always produce period Georgian replicas, but, instead, inspired the employment of the stylistic characteristics and features in new and innovative ways. The style guide states the following regarding the applicability of the style to new buildings and renovations in the period between the First and Second World Wars:

Generally, the Colonial Revival style took certain design elements - front façade symmetry, front entrance fanlights and sidelights, pedimented doorways, porches and dormers - and applied them to larger scale buildings. These colonial era details could be combined in a great variety of ways, creating many subtypes within this style.6

---

**Common Building Type.** The style guide also calls out commercial buildings as a common building type related to the Colonial Revival style. The subject property is a distinctive of an era that was defined by low-rise commercial and light industrial buildings that featured Colonial Revival façades in the first half of the twentieth century.

**Identifiable Features.** The style guide also identifies twelve major “identifiable features” that were commonly associated with the Colonial Revival Style. The façade of the subject building possesses more than half of those characteristics (numbers align with the style guide):

No. 5: Pilasters [in this case the pilasters are simply piers]
No. 6: Symmetrical façade
No. 7: Double-hung windows, often multi-paned
No. 8: Triple windows
No. 10: Decorative pendants
No. 12: Cornice with dentils or modillions

While there is no “Columned porch or portico,” (No. 1), “Pedimented door, windows, or dormers,” (No. 2), “Broken pediment over front door,” (No. 3), the building does feature a projecting central entrance with a fanlight that is often found in Georgian and/or Federal period houses. Additionally, what the aforementioned style guide doesn’t identify as among the “identifiable features,” Virginia Savage McAlester does in her updated version of *A Field Guide to American Houses* (2013). One of these features is the application of the window in the second floor of the central bay in a manner that works to emulate the use of distinctive apertures and panels often featured above a Georgian doorway that is notable in its own right unlike all the other windows of the fenestration. McAlester also identifies other Colonial Revival features that are integral to the subject façade including the use of the red brick, Flemish bond, and courses of soldier brick and stone or concrete.

**CRITERION C**
The former Woodward-Wanger Co. reflects the environment of commercial and light industrial Philadelphia in an era characterized by the Colonial Revival style. Enumerable examples of commercial and light industrial buildings with distinctive and unnecessarily stylized Colonial Revival façades may be found in and around Philadelphia. These buildings represent a period when old commercial streets and concerns were “modernizing” and updating; residential streets were becoming commercial; and other areas were developed and/or redeveloped from rural to commercial and/or industrial uses.

The Crescent Iron Works, 4901 Grays Avenue, which was built in the Colonial Revival style in 1929 by Edward H. Reuss, one of the leading plumbing and electrical equipment manufacturers of the day. Source: Michael Bixler.

Looking north, the Colonial Revival building at 1108-1112 Frankford Avenue, which in the 1940s housed the Ajax Electric Furnace Company. This is a smaller building, but has a distinctive Colonial Revival façade. Source: Google.

Looking southwest, this former industrial building at 4732 Stenton Avenue, Wayne Junction in Germantown is both Colonial Revival and Art Deco, featuring many historic elements of style that were discussed above. Source: Google.

Looking south at the entrance gate and the associated office buildings at the Navy Yard in South Philadelphia. These are similar buildings designed in the Colonial Revival style. While featuring a more institutional appearance there are similarities. Source: Google.

A typical low-rise industrial building at the corner of Germantown Avenue and Berkley Street, Wayne Junction in Germantown that has some Colonial Revival treatment as applied to more modernist building types. Source: Google.
Looking northwest, this building, located in the 2900 block of N. 16th Street is entirely utilitarian, but does interestingly employ several Colonial Revival features in a minimalist tradition. Note the overall form of the building, the red brick façade, the lightly-colored coping, the broken pediment and door surround, and the fanlight. Source: Google.
