

Streets Paving Program and List

The Streets Department's mission is to provide clean, green and safe streets. Our goal is to maintain Philadelphia streets in a state of good repair that allows for safe and efficient travel for all users including pedestrians, cyclists and motorists. The Department's mission supports the Mayor's Vision Zero goal which aims to reduce traffic-related deaths and severe injuries to zero on Philadelphia streets by 2030, while increasing safety, health and mobility for all. The paving program is also a key initiative under CONNECT, the City of Philadelphia's Strategic Transportation plan for the next seven years and supports the City's vision of a transportation system that benefits everyone.

Street paving is a very complex process and we know it can be an inconvenience to residents, businesses and visitors which is why it is imperative to keep the public informed and provide updates during each paving phase. Therefore, the Streets Department is pleased to present its annual paving guide program titled, "Paving Program and List". It provides a list of city streets to be paved and a step-by-step guide on the entire paving process including detailed information during each stage – from the selection of streets to be resurfaced; to the completion of a newly paved roadway.

The Streets Department is committed to providing Philadelphia residents and visitors with smooth and safe streets in every neighborhood. By prioritizing safety in street design, the Streets Department's repaving program supports Vision Zero's goals.

Philadelphia has 2,575 roadway miles throughout its geographic boundaries. The streets network in Philadelphia includes 2,180 miles of city streets, 35 miles of roads within Fairmount Park and 360 miles of state highways. The Transportation Division constructs, repairs, and maintains City streets by determining the location, time, method, and manner for street resurfacing and reconstruction. State roads are managed and maintained by the Pennsylvania Department of Transportation (PennDOT). Appendix A illustrates the locations of roadways in the City Local Network. Appendix B is a map and list of state routes maintained and resurfaced by PennDot.

The City's inventory also includes many roadways that are funded under the Federal Aid for Municipalities Highway Program (FAM routes). The City contracts FAM routes to private contractors to perform reconstruction and resurfacing work. As existing sections of the Federal-aid highways deteriorate, certain repair, reconstruction, and rehabilitation projects become eligible for Federal aid. Appendix C illustrates the locations of Federal Aid Roadways (FAM) in the City of Philadelphia. According to national standards the City needs to pave a minimum of 131 miles of roadway annually, to continually maintain streets in a state of good repair. Over the years the Streets Department has been challenged to meet the goal of 131 repaving miles. Philadelphia's harsh weather climate conditions causes rapid deterioration and increased defects on roadways. The City also must comply with federal mandates to install ADA (American with Disability Act) ramps wherever repaving is performed without additional funding. These challenges combined with the 2008 recession caused decreased paving across the city.

Mayor Kenney has made street paving a high priority in his Administration and has provided over \$317 million of funding support over a six-year period for road reconstruction and resurfacing, and installation of ADA ramps. In FY22 alone the Administration has made an investment of \$132.2 million to address the condition and quality of our streets. This is the largest single-year investment in the City's history, and will help workers, residents, and visitors access their destinations reliably and safely.

Street Selection Process Street Paving Process

The Streets Department's paving list is generated annually and refined during the winter months in preparation for resurfacing activities that begin in the spring and continue through the fall of each year weather permitting. The Department compiles the paving program list by prioritizing streets based on an index rating and national industry standards for municipal streets. Streets that exhibit certain signs of roadway failure, damage or deterioration will generally receive the most consideration for maintenance, repair and resurfacing. Vehicle traffic counts and crash ratios are also considered. Other factors include available funding sources, storm water control needs, and future utility and construction projects.

The Department maintains a database with the paving history for each block as well as records of inspections on road conditions. The Department uses an adaption of the Pavement Condition Index (PCI) survey procedure developed by the U.S. Army Corps of Engineers. A score ranging from 0 (failed) to 100 (excellent) is determined by rating distresses while riding in a vehicle at a slow speed. Surveys of each block determine severity level (low, medium, high) of each distress (like cracking and rutting) and estimates the extent of each. The Department has a system to run budget scenario analysis of the PCI data to recommend streets to include in the paving program.

The Department also maintains records of repaired potholes, utility and plumber ditch restorations, and emergency utility excavations for each block. Streets coordinates with the Philadelphia Water Department (PWD), PGW, and other utilities to compare the proposed paving program against their planned utility capital improvement programs. GIS mapping technology is used to overlay these programs on a map to minimize conflicts. Regular meetings are scheduled with PWD and PGW to discuss programs and coordination efforts.

After the paving schedule is set, the streets are ready to be paved. The work to repair and improve roadways ranges from pothole patching to resurfacing to road reconstruction. A resurfacing project typically includes removal of the top layer of current asphalt and placement of a new layer of asphalt. As needed, separate contracts for upgrades to federally required ADA curb ramps are bid. New curbs and sidewalks are not included in resurfacing projects. Every street is different, so all resurfacing projects vary in scope, cost, and time to complete. In addition, any work in the process may be delayed in the event of inclement weather or special events.

Once the paving season begins the Streets Department notifies the public of upcoming paving work on each block. The Department will post the Paving Program Schedule on its website phila.gov/paving and provide notifications of specific work performed on each block. Residents can sign up to receive text alerts by visiting phila.gov/ready. Residents can opt-in to receive alerts specific to Streets Department services by registering online.

For each phase of the paving process, contractors are required to post temporary "No Parking" signs on each block 48 hours in advance of the work. If motorists do not move their car at the required time, the vehicle will be towed to a nearby location. Local police districts are provided with a list of the vehicle locations. Residents will still have access to their driveways and be permitted to park on the block after the work is completed each day.

Step 1 Milling

The City's paving program is completed using a combination of private contractor and city forces. Private contractors are responsible for milling.

Milling is the process of grinding off the top layer of asphalt or surface of a roadway. This is usually done in preparation for paving. Although the Streets Department takes steps to minimize the inconvenience, milling requires trucks and specialized machinery to remove the asphalt. On-street parking is prohibited during this work. "No parking" signs indicating the hours for the restrictions will be posted. Vehicles will still have access in and out of driveways. Contractors will, if needed, tow vehicles to a nearby street, so it is important to not park on a milled street that is about to be repaved.

Contractors, will if needed, tow vehicles to a nearby street, so it is important to not park on a street that is about to be milled.

Step 2 Street Adjustments

After asphalt is milled off, utility manholes and castings are prepped and/or replaced by the contractor. Contractors must post new "No Parking" signs with the dates for the prep work.

Adjustments to utility valve boxes and manholes may be necessary prior to performing the resurfacing operations on a project. These adjustments are normally simple and take only a matter of hours but complex adjustments can take up to several days to complete. The adjustment can normally be accomplished without interruption of service to the property owners. However, if a situation arises that requires the Streets Department to temporarily interrupt water or sewer service, proper notifications are provided to the property owners.

The Department initiated a Master Casting Adjustment Program with the larger private utilities (PGW, PECO, and Verizon) to reduce the average number of days this step adds to the paving process to reduce the inconvenience to the public.

5-Week Process

1 Week - MILLING

1 Week - ADJUSTMENTS

Step 3 Street Paving

Contractors notify City crews after the streets are milled and prepped for paving.

Street repaving provides a new layer of asphalt surface on the street to protect the underlying road structure and improve the quality of the ride. Prior to resurfacing some streets, a tar-like tack coat material is applied. This tar-like material seeps into the cracks of the underlying pavement, sealing the existing pavement and helps in bonding the new surface course. Unless delayed by weather or special events, the paving will occur within a few weeks of the milling. Paving is done in the following steps:

- Application of a sticky, tar-like layer called tack coat, which helps the asphalt adhere to the roadway. Residents should avoid driving or walking on tack coat
- b. Next, a new layer of asphalt is laid down on the pavement with paving machines
- c. Finally, rollers follow the paving equipment to smooth the asphalt
- d. Joints and curblines are sealed with a liquid asphalt

City paving crews complete the overlay of asphalt and the installation of pavement markings and crosswalks. City crews will repost "No Parking" signs announcing the dates they will close the street for each paving step. Once again residents are required to move their car during these workdays.

Step 4 Street Line Striping

Road surface markings are used on paved roadways to provide guidance and information to drivers and pedestrians. Uniformity of the markings is an important factor in minimizing confusion and uncertainty about their meaning, and efforts exist to standardize such markings across borders. They can be used to delineate traffic lanes, bike lanes, inform motorists and pedestrians, serve as noise generators when run across a road, or attempt to wake a sleeping driver when installed in the shoulders of a road. Road surface markings can also indicate regulations for parking and stopping.

The installation of placement markings and crosswalks is the final phase. City crews post "No Parking" signs for portions of the street where markings are being applied. Striping is done over a series of days / weeks utilizing several city crews:

- Temporary layout lines are measured and installed to show where the permanent marking locations should be placed
- b. The permanent striping lines are installed at crosswalks
- c. The long lines at the edge and center of street are installed
- d. Arrows and other directional indicators are the final line striping markings installed
- e. For some bike lanes, green paint is applied

- Street Paving Cycle

3 Weeks - PAVING & LINE STRIPING

Paving Program

Community Outreach

To make the paving process more transparent, the Streets Department has developed additional tools to keep residents informed of what to expect when their street is being repaved. As an additional means of notification, door hangers will be distributed by Streets Department crews and contractors. Residents can stay updated on the paving process of their block at StreetSmartPHL.phila.gov using the PavePHL app.

Door Hangers

As part of its paving notification process, Streets Department contractors will place door hangers on residents vehicles or doors when a block has been scheduled for paving. The door hangers will be placed prior to the beginning of paving to give residents proper notification to move their vehicles.

StreetSmartPHL

Residents can stay updated on the progress of the paving of their street using the PavePHL tool, the City's web map paving tracker which allows residents to go online and view the progress of a street scheduled for paving. It is one of the four components housed on the StreetSmartPHL.phila.gov platform which allows the Streets Department to communicate to the public about some of its most prominent and visible core services. The platform houses four components: PavePHL, PermitPHL, PickupPHL and PlowPHL.

The StreetSmartPHL platform answers the question, "Are you Street Smart?" by connecting residents and stakeholders to real-time information related to permits, paving, snow plowing, and daily trash and recycling collections. StreetSmartPHL is the City's first online "smart" tool designed to give residents, visitors and businesses direct access to the Streets Department's core services. The site is in its beta phase. Feedback about its use and/or how the tool can be improved is encouraged.

How are residents notified about paving work?

When paving work is expected on a block residents are notified through the following means:

- Posted temporary "No Parking" signs stating specified dates and times when vehicles must be relocated. This will prevent the need for vehicles to be towed, as well as prevent delays in the project. If a vehicle is towed, residents should contact their local Police District for the location of the vehicle. A complete list of Police Districts can be found at www.phillypolice.com.
- Press releases distributed with the complete list of scheduled streets; special press releases distributed for high-traffic areas and streets being resurfaced overnight.
- Paving Program schedule posted at www.phila.gov/paving
- Door hangers place on vehicles or doors to notify residents when paving will take place.
- Text alerts to residents who opt-in at phila.gov/ready. Receive customized alerts on Streets Department services by registering online.
- Announcements posted on Nextdoor social site
- On social media follow @PhilaStreets

How long is the paving process?

The entire paving operation is completed over a period of three-to-five weeks from the time work begins. The anticipated time to complete work on each street segment varies and is dependent on the length and width of the street. Each step takes place in separate activities over the course of one to two days.

Can the timeline for completed paving operations be altered?

The timeline for paving operations may change depending upon weather conditions and area special events. Emergency utility work can also alter the paving schedule. We understand paving operations can be disruptive. We appreciate residents support and patience as we work to improve city streets.

Will sidewalks be replaced during paving operations?

New curbs and sidewalks are not included in paving operations. Prior to the repaving process photos of existing conditions are taken as the City and/or its contractor cannot be held responsible for any pre-existing damaged or illegally capped curbs. However, if a resident finds there has been curb damage during repaving, please contact 311 to report.

A. Paving Program

The paving program identifies the funding source and or entity leading the paving effort for a particular block. The three included in the Paving List are: City Local (100 percent City funds); Federal Aid for Municipalities (FAM Routes funded with a mix of city, state and federal funds) and PennDOT (State Routes funded and paved by Pennsylvania's Department of Transportation).

B. Hundred Block

The hundred block provides the exact segment of the street being paved

C. On_Street

On Street identifies the street to be paved

D. From_Street

Provides beginning boundary of the street being paved

E. To_Street

Provides the ending boundary of the street being paved

F. Council

Identifies the Philadelphia City Council District

G. Potholes

Provides the number of repaired potholes and asphalt repairs in last 3 years

H. Ditches

Provides the number of plumber and utility ditches repaired over the last 3 years

I. EUNs

EUNs identifies the number of Emergency Utility Notifications or Excavations made by Public Utilities in the street / on sidewalks over the last 3 years

J. CPI

CPI provides the paving condition using an index rating that estimates the current condition of a roadway surface.
