

## RESPONSE TO TRANSCRIPT REQUESTS

**TR-8.** Provide quantification of stormwater greened acre benefits achieved to date.

**Response:** As of the end of FY15, PWD reported 132 greened acres through the SMIP and GARP grant programs in its Combined Sewer Management Program Annual Report. Greened acres from SMIP and GARP, along with those that result from private redevelopment and PWD capital projects, put PWD on track to hit, or exceed, its first 5-year interim milestone of 744 greened acres. By year 10 of the Consent Order & Agreement, PWD must achieve 2,148 greened acres. Greened acres from the SMIP & GARP grant programs are 1/3 the cost of those constructed through PWD's capital program and are anticipated to be a significant component of PWD's compliance in years 5 through 10.
